

# Canadian Results from EMIS 2017

EMIS-2017 (European Men-who-have-sex-with-men Internet Survey) was an online survey for gay, bisexual, and other men who have sex with men (gbMSM) living in European and other countries, including Canada. EMIS aimed to generate data useful for planning HIV and STI prevention and care programmes. EMIS took place from October 2017 to January 2018. 5,165 Canadian participants were included in this analysis.

## Who Participated?

- gbMSM from every province and territory

### Sexual identity

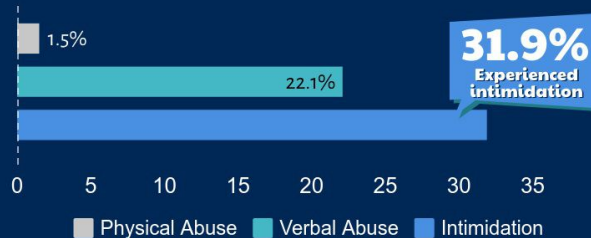

Gay (76.0%)	Bisexual (17.5%)
Straight (0.9%)	Other (5.7%)

**79.3%**  
Born in Canada

**2.4%**  
identified as transmen

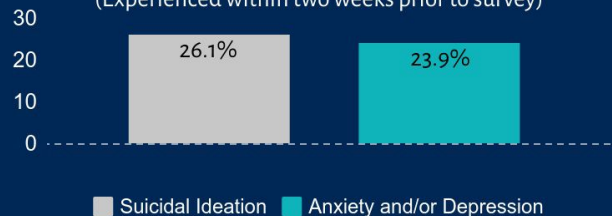

## Experienced stigma and discrimination

(Experienced within year prior to survey)

## Mental health problems

(Experienced within two weeks prior to survey)

## HIV & STI diagnoses

**9%**  
HIV Diagnosis

On treatment	99.1%
Undetectable viral load	96.7%
Syphilis	3.2%
Gonorrhoea	7.1%
Chlamydia	6.5%

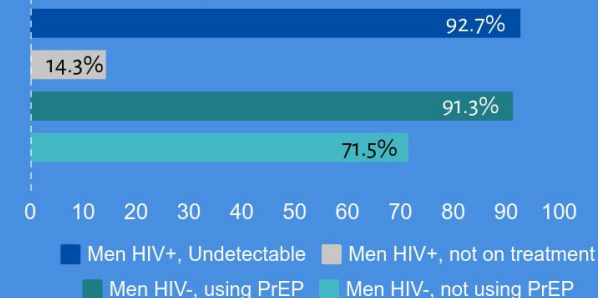

(Diagnosed in previous year)

## PrEP & sexual practices

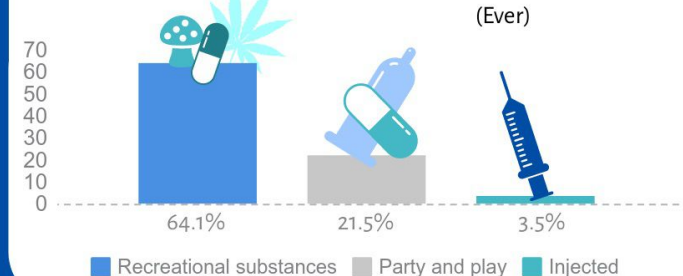

## Any condomless anal sex with a casual partner

(In year prior to survey)

## Substance Use

(Ever)

Acknowledgements: EMIS-2017 was carried out by Sigma Research (London). It was funded by the Health Programme (2014-2020) of the European Union. Canadian participation was funded by the Public Health Agency of Canada. For more information, look for our full length report in CCDR titled: Canadian Results from EMIS-2017.
