

WEST NILE VIRUS AND OTHER MOSQUITO-BORNE DISEASE NATIONAL SURVEILLANCE REPORT

JULY 13 TO JULY 19, 2014 – REPORT WEEK 29

CANADA

HUMANS:

As of surveillance week 29 (July 13 to July 19, 2014), no human cases of West Nile virus (WNV) have been reported to the Public Health Agency of Canada (the Agency).

MOSQUITOES:

As of surveillance week 29, Quebec reported one mosquito pool tested positive for WNV in the Montréal region.

DEAD BIRDS:

No dead birds positive for WNV have been reported by the Canadian Wildlife Health Cooperative.

DOMESTIC ANIMALS:

No animals positive for WNV have been reported by the Canadian Food Inspection Agency.

National WNV surveillance data and maps can be accessed via the [PHAC web site](#).

UNITED STATES

Since the start of the 2014 WNV season, 29 human WNV cases [Arizona (1), California (9), Colorado (2), Georgia (1), Iowa (1), Louisiana (1), Minnesota (1), Mississippi (2), Missouri (1), Oklahoma (1), South Dakota (6), Tennessee (1), Texas (1) and Wisconsin (1)] have been reported by the Centers for Disease Control and Prevention. Of these, 14 (48.3%) were diagnosed as neuroinvasive disease cases and 15 (51.7%) as non-neuroinvasive cases. One fatal case was reported. Eight cases of presumptive viremic blood donors were reported.

Detailed information can be accessed via the [CDC web site](#).

EUROPEAN UNION, EUROPEAN ECONOMIC AREA AND NEIGHBOURING COUNTRIES

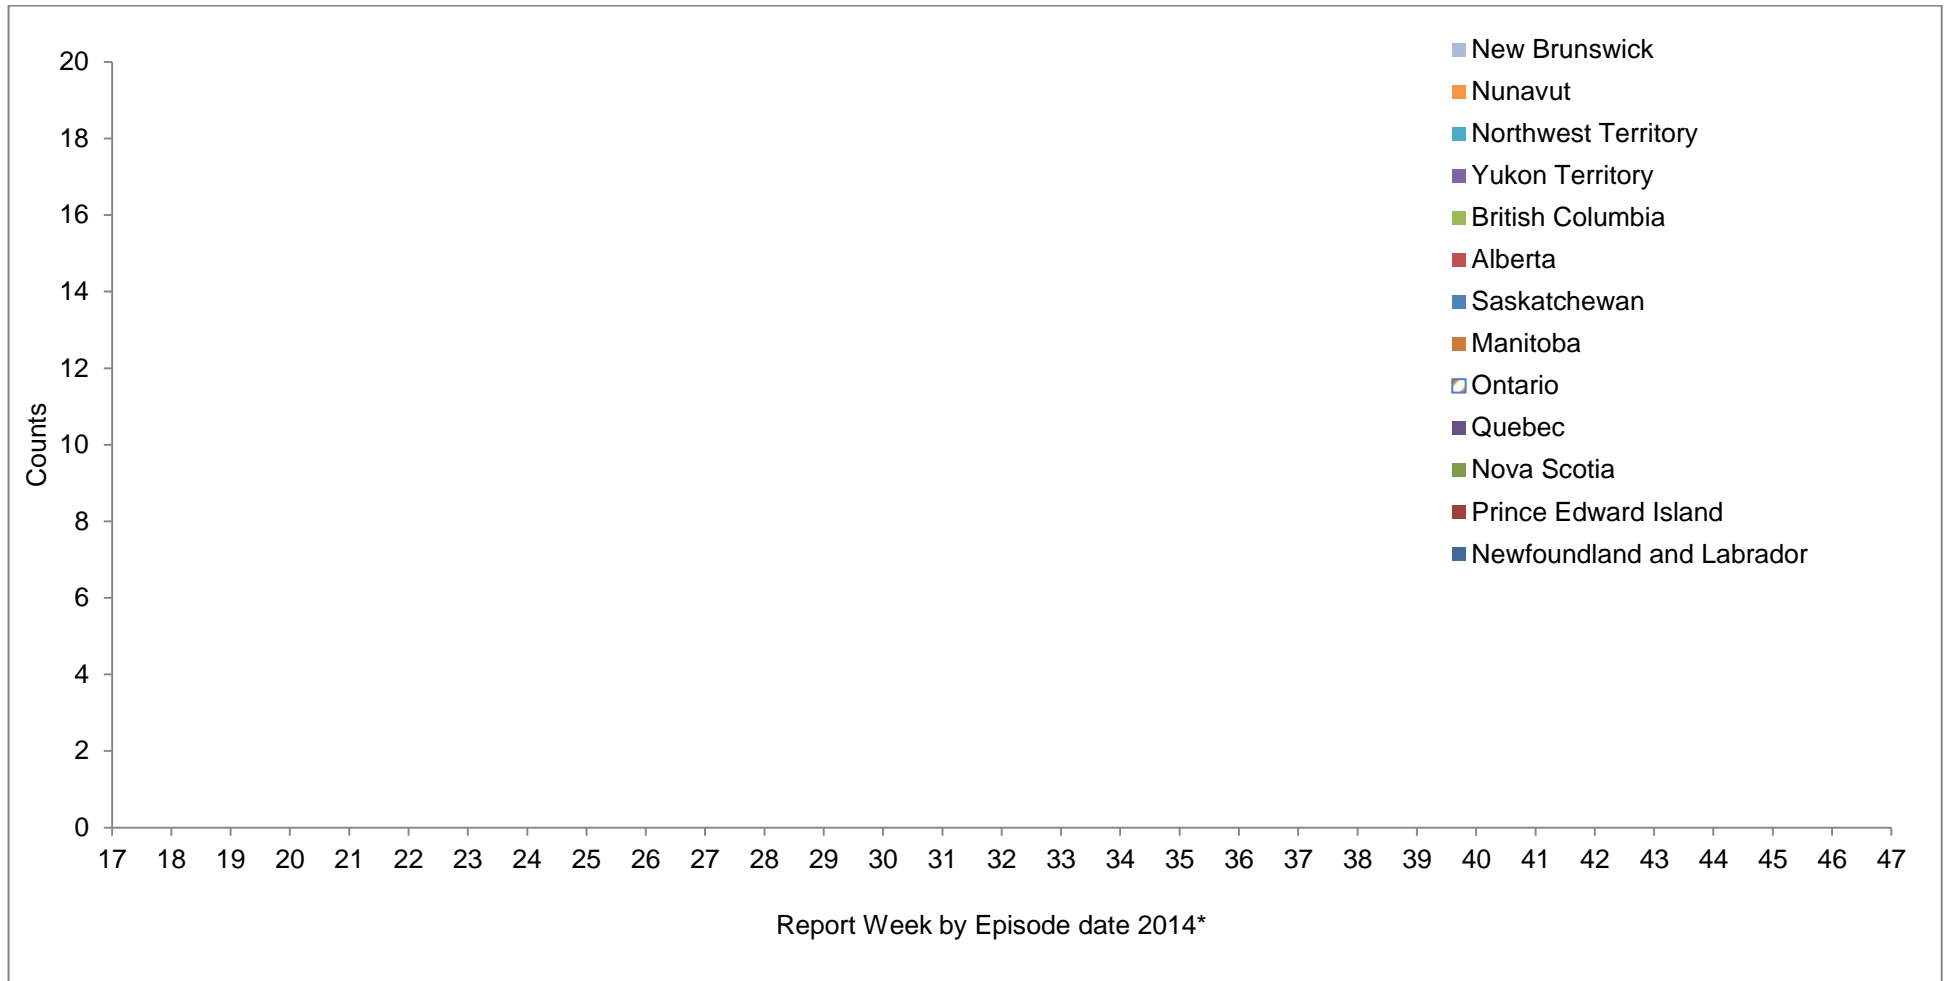

Since the start of the 2014 WNV season, no human cases of WNV have been reported in the European Union/European Economic Area by the European Centre for Disease Prevention and Control. Seventeen human cases have been reported in neighbouring countries: Bosnia and Herzegovina (13), Russian Federation (1) and Serbia (3).

Detailed information can be accessed via the [ECDC web site](#).

¹ Total clinical cases is the sum of both probable and confirmed: West Nile virus neurological and non-neurological syndromes, along with any unclassified or unspecified cases.

² Likely related to travel outside the province/territory. These cases are included in either the total clinical cases or West Nile virus asymptomatic infections.

³ Satisfies West Nile virus diagnostic test criteria in the absence of clinical criteria. This category could include asymptomatic blood donors whose blood is screened using a nucleic acid amplification test (NAT), by blood operators (i.e. Canadian Blood Services or Hema-Quebec) and is subsequently brought to the attention of public health officials. Blood operators in Canada perform a supplementary West Nile virus specific NAT following any positive donor screen test result.
