

WEST NILE VIRUS AND OTHER MOSQUITO-BORNE DISEASE NATIONAL SURVEILLANCE REPORT

OCTOBER 19 TO OCTOBER 25, 2014 – REPORT WEEK 43

OCTOBER 26 TO NOVEMBER 1, 2014 – REPORT WEEK 44

CANADA

HUMANS

During surveillance week 43 (October 19 to October 25, 2014) and 44 (October 26 to November 1, 2014), no human cases of West Nile virus were reported to the Public Health Agency of Canada.

As of surveillance week 43 and 44, 21 human clinical cases of West Nile virus have been reported in Canada: five in Manitoba [Interlake-Eastern Health Region (1), Prairie Mountain Health Region (2)*, Southern Health Region (1) and Winnipeg Health Region (1)], 10 in Ontario [Chatham-Kent (1), Halton Region (2), Lambton County (1), City of Ottawa (2), Simcoe-Muskoka District (1) and City of Toronto (3)] and six in Quebec [Lanaudière (1), Montérégie (3) and Montreal (2)].

Of the 21 human clinical cases, 10 (47.6%) are classified as West Nile virus non-neurological syndrome, nine (42.9%) as West Nile virus neurological syndrome and two (9.5%) as unclassified/unspecified.

One asymptomatic infection has been reported in Ontario: Windsor-Essex County.

* One of these cases was likely exposed prior to the 2014 West Nile virus season.

MOSQUITOES

As of surveillance week 43 and 44, a reported 219 mosquito pools have tested positive for West Nile virus in Canada: 24 in Manitoba [Interlake-Eastern Health Region (7), Prairie Mountain Health Region (1), Southern Health Region (1) and Winnipeg Health Region (5)]; 56 in Ontario [Haliburton-Kawartha-Pine Ridge District (1), Halton Regional (3), City of Hamilton (7), Lambton (1), Middlesex-London (4), Niagara Regional (2), City of Ottawa (3), Peel Regional (22), City of Toronto (10), Windsor-Essex County (1) and York Regional (2)]; 119 in Quebec [Laval (13), Montérégie (42) and Montreal (64)] and 20 in Saskatchewan.

DEAD BIRDS

As of surveillance week 43 and 44, the [Canadian Wildlife Health Cooperative](#) tested 121 dead birds for West Nile virus in Canada: Ontario (30), Quebec (21) and Saskatchewan (70). Of these, 16 (13.2%) dead birds have tested positive for West Nile virus in Canada: Ontario (6), Quebec (8) and Saskatchewan (2).

DOMESTIC ANIMALS

As of surveillance week 43 and 44, the [Canadian Food Inspection Agency](#) reported 21 horses have tested positive for West Nile virus in Canada: Alberta (7), Manitoba (1), Ontario (1), Quebec (4) and Saskatchewan (8).

UNITED STATES

As of October 28, 2014, the [Centers for Disease Control and Prevention \(CDC\)](#) reported 1,668 West Nile virus human disease cases:

Alabama (2), Arizona (67), Arkansas (6), California (608), Colorado (108), Connecticut (5), District of Columbia (3), Florida (13), Georgia (11), Idaho (18), Illinois (36), Indiana (8), Iowa (12), Kansas (41), Louisiana (111), Maryland (6), Massachusetts (5), Michigan (1), Minnesota (14), Mississippi (45), Missouri (12), Montana (5), Nebraska (120), Nevada (3), New Jersey (7), New Mexico (20), New York (18), North Dakota (22), Ohio (9), Oklahoma (16), Pennsylvania (10), South Carolina (2), South Dakota (57), Tennessee (6), Texas (207), Utah (2), Virginia (6), Washington (12), Wisconsin (8) and Wyoming (5).

Of these, 976 (58.5%) were diagnosed as neuroinvasive disease cases and 692 (41.5%) as non-neuroinvasive disease cases. Fifty-eight fatal cases were reported. Two hundred and seventy-five presumptive viremic blood donors have been identified.

EUROPEAN UNION, EUROPEAN ECONOMIC AREA AND NEIGHBOURING COUNTRIES

During surveillance week 43, the [European Centre for Disease Prevention and Control \(ECDC\)](#) reported one human case of West Nile fever in Romania. In the neighbouring countries, no cases were reported.

As of October 23, 2014, 74 human cases of West Nile fever have been reported in Europe: Austria (1), Greece (15), Hungary (11), Italy (24) and Romania (23). In the neighbouring countries, 120 human cases were reported: Bosnia and Herzegovina (13), Israel (9), Russian Federation (29) and Serbia (69).

FIGURE 1: West Nile Virus clinical cases and asymptomatic infections, by Province/Territory and by report week, 2014 season

* West Nile virus clinical cases and asymptomatic infections are grouped by report week, based on episode date. Episode date could include one of the following: onset date, diagnosis date, lab sample date or reporting date.

¹ Total clinical cases is the sum of both probable and confirmed: West Nile virus neurological and non-neurological syndromes, along with any unclassified or unspecified cases.

² Likely related to travel outside the Province/Territory. These cases are included in either the total clinical cases or West Nile virus asymptomatic infections.

³ Satisfies West Nile virus diagnostic test criteria in the absence of clinical criteria. This category could include asymptomatic blood donors whose blood is screened using a nucleic acid amplification test, by blood operators (i.e. Canadian Blood Services or Hema-Quebec) and is subsequently brought to the attention of public health officials. Blood operators in Canada perform a supplementary West Nile virus specific nucleic acid amplification test following any positive donor screen test result.

* One of these cases was likely exposed prior to the 2014 West Nile virus season.

FIGURE 2: West Nile Virus clinical cases and asymptomatic infections by report week for selected years
