

WEST NILE VIRUS AND OTHER MOSQUITO-BORNE DISEASE NATIONAL SURVEILLANCE REPORT

SEPT 13 TO SEPT 19, 2015 – REPORT WEEK 37

CANADA

HUMANS

During surveillance week 37, ending on Sept 19, 2015, nine (9) human clinical cases of West Nile virus were reported to the Public Health Agency of Canada (the Agency). Of these, six cases were reported in Quebec [Montérégie (2), Laval (2), Outaouais (1) and Capitale-Nationale (1)], one case in Ontario (Hamilton) and two cases in Manitoba [Winnipeg (1), Southern (1)].

As of surveillance week 37, a total of 31 human clinical cases have been reported to the Agency: Quebec (11), Ontario (16), and Manitoba (4). Of these, twelve (39%) were classified as West Nile virus Neurological syndrome, fourteen (45%) as West Nile virus Non-neurological syndrome, and five (16%) as Unclassified. In addition, three (3) asymptomatic infections have been reported in Quebec [Laval (1) and Montérégie (2)].

MOSQUITOES

As of surveillance week 37, 155 (0.83%) out of the 18,668 mosquito pools have tested positive for West Nile virus in Canada: Quebec (17), Ontario (92), Manitoba (30), and Saskatchewan (16).

DEAD BIRDS

As of surveillance week 37, the [Canadian Wildlife Health Cooperative](#) and the [Quebec Ministry of Health and Social Services](#) have reported a total of 35 dead birds that were tested positive for West Nile virus: Quebec (16), Ontario (18), and Saskatchewan (1).

DOMESTIC ANIMALS

As of surveillance week 37, the [Canadian Food Inspection Agency](#) has reported 9 horses that were tested positive for West Nile virus: Ontario (3), Manitoba (1), Saskatchewan (3) and Alberta (2).

Two horses from Ottawa, Ontario have tested positive for Eastern equine encephalitis virus.

UNITED STATES

As of Sept 22, 2015, the [Centers for Disease Control and Prevention \(CDC\)](#) has reported a total of 877 human cases of West Nile virus:

Alabama (3), Arizona (57), Arkansas (11), California (157), Colorado (70), Connecticut (3), Delaware (1), District of Columbia (1), Florida (6), Georgia (7), Idaho (7), Illinois (22), Indiana (12), Iowa (4), Kansas (12), Louisiana (22), Maryland (33), Massachusetts (3),

Michigan (7), Minnesota (3), Mississippi (27), Missouri (16), Montana (2), Nebraska (40), Nevada (7), New Jersey (16), New Mexico (8), New York (14), North Carolina (3), North Dakota (14), Ohio (24), Oklahoma (39), Oregon (1), Pennsylvania (22), South Dakota(31), Tennessee (3), Texas (127), Utah (3), Virginia (11), Washington(21), Wisconsin (3) and Wyoming (4).

Of these, 538 (61%) were diagnosed as neuroinvasive disease cases, 339 (39%) as non-neuroinvasive disease cases. 43 fatal cases were reported. In addition, 197 presumptive viremic blood donors have been identified.

ISSN: 2368-2841

EUROPEAN UNION, EUROPEAN ECONOMIC AREA AND NEIGHBOURING COUNTRIES

As of 17 September 2015, [the European Centre for Disease Prevention and Control](#) has reported 59 cases of West Nile fever in humans in the EU Member States: Austria, Belgium, Bulgaria, Croatia, Republic of Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden and the UK, as well as 72 cases in the neighboring countries: Armenia, Azerbaijan, Belarus, Georgia, Moldova, Ukraine, Algeria, Egypt, Israel, Jordan, Lebanon, Libya, Morocco, Palestine, Syria and Tunisia, since the beginning of the 2015 transmission season.

Total	12	15	4	31	3	3

¹ Total clinical cases is the sum of both probable and confirmed: West Nile virus neurological and non-neurological syndromes, along with any unclassified or unspecified cases.

² Likely related to travel outside the Province/Territory. These cases are included in either the total clinical cases or West Nile virus asymptomatic infections.

³ Satisfies West Nile virus diagnostic test criteria in the absence of clinical criteria. This category could include asymptomatic blood donors whose blood is screened using a nucleic acid amplification test, by blood operators (i.e. Canadian Blood Services or Hema-Quebec) and is subsequently brought to the attention of public health officials. Blood operators in Canada perform a supplementary West Nile virus specific nucleic acid amplification test following any positive donor screen test result.

FIGURE 2: West Nile Virus clinical cases and asymptomatic infections by report week for selected years

* West Nile virus clinical cases and asymptomatic infections are grouped by report week, based on episode date. Episode date could include one of the following: onset date, diagnosis date, lab sample date or reporting date.
