Postal code conversion file

September 2008

The September 2008 update of the *Postal Code Conversion File* (PCCF) is now available. This file links the six-character postal codes to the standard 2006 Census geographic areas (such as dissemination areas, census tracts and census subdivisions). By linking postal codes to the Statistics Canada geographic areas, the file facilitates the extraction and subsequent aggregation of data for selected geographic areas. The PCCF also associates each postal code with a longitude and latitude coordinate to support mapping applications. The file also indicates the source, quality and type of linkage made between the postal code and the geographic area.

The September 2008 update of the *Postal Codes by Federal Ridings File* (2003 Representation Order) is also available. This product, a subset of the PCCF, provides a link between the six-character postal code and Canada's federal electoral districts (commonly known as federal ridings). The "unique link" variable indicates if the postal code is linked to one or more federal electoral districts (FEDs). When the postal code is linked to more than one FED, the "weight" variable estimates the proportion of the population of the postal code that resides within each FED.

Definitions, data sources and methods: survey number 3901.

The *Postal Code Conversion File* (92-153-XCB, \$10,000; update 92-153-UCB, \$1,670) and the *Postal Codes by Federal Riding File* (92F0193XCB, \$2,500; update 92F0193UCB, \$500) are available in ASCII format on diskette or CD-ROM. See *How to order products*.

The reference guides for the *Postal Code Conversion File* (92-153-GWE, free) and the *Postal Codes by Federal Ridings File* (92F0193GWE, free) are available in electronic format from the Publications module of our website.
