Production of principal field crops

September 2008

Farmers, in mid-harvest, reported they expect to produce 10.9 million metric tonnes of canola, exceeding the previous record of 9.5 million tonnes produced in 2007. Wheat excluding durum production is reported to be up 35.6% over 2007. In Eastern Canada, Quebec farmers anticipate a record production of 615 000 tonnes of soybeans.

At the time of the September Farm Survey, crop maturity and the fall harvest in the West were delayed by cool conditions and excess moisture. Harvest conditions were most advanced in southern regions but they improved considerably in most areas after the survey had taken place.

Canola production up

Canola production is expected to rise to 10.9 million tonnes, 1.4 million tonnes above the previous high of 9.5 million tonnes reported in 2007. This exceeds the pre-harvest July estimate by 495 000 tonnes. Production should increase mainly as a result of an above-average yield of 30.6 bushels per acre.

On the Prairies, where 99% of canola is grown, farmers expect to exceed the previous record production in each province. The mid-harvest yields reported in the September survey showed an improvement over the pre-harvest yields from the July survey in both Manitoba and Saskatchewan.

Wheat excluding durum production expected to exceed five-year average

Farmers expect to harvest 22.2 million tonnes of wheat excluding durum, up 35.6% from 16.4 million tonnes in 2007 and easily exceeding the previous five-year average (2003 to 2007) production of 19.4 million tonnes. A 15.0% increase in harvested area and a yield of 42.8 bushels per acre account for this increase.

Note to readers

The September Farm Survey was conducted from September 2 to September 9, 2008.

Production in Manitoba, Saskatchewan and Alberta is expected to increase over 2007, exceeding their previous five-year provincial averages.

Mid-harvest yields showed improvement in all Prairie provinces compared with the pre-harvest yields reported in July.

Soybean production expected to rise in the East

Total soybean production is expected to reach 3.2 million tonnes, just short of the highest level of 3.5 million tonnes produced in 2006. Production should rise in both Quebec and Ontario, where 90% of soybeans are grown.

Production in Quebec is anticipated to increase 30.3% to 615 000 tonnes, a value exceeding the previous high of 535 000 tonnes set in 2006. The production increase is the result of a 31.6% rise in harvested area from 2007.

Soybean production in Ontario is expected to rise to 2.3 million tonnes, up 16.3% from 2007, due to a yield increase. Farmers reported a yield of 40.8 bushels per acre, up 7.8 bushels per acre over 2007.

Available on CANSIM: tables 001-0004, 001-0010 and 001-0017 to 001-0020.

Definitions, data sources and methods: survey number 3401.

The publication *Field Crop Reporting Series: "September estimate of production of principal field crops, Canada,"* 2008, Vol. 87, no. 7 (22-002-XWE, free), is now available from the *Publication* module of our website.
