Food Fraud Vulnerability Assessment

Guidance: Delete any information that does not describe your operations. Add any potential vulnerabilities and their respective mitigation strategies that are needed to accurately describe your operations.

Stage in Production	Vulnerability	Mitigation strategies	Mitigation is effective
On-Farm	Adulterate non-GMO (IP) grain with GMO grain	- Contracting with producers - Use of certified seed - Supplier controls/performance monitoring of producers - CIPRS - IP and traceability program	yes
	Adulterate organic grain with unapproved inputs (i.e. crop protectants)	Purchasing from certified organic producers	yes
	Adulterate organic grain with non-organic grain	Purchasing from certified organic producers	yes
Receiving	Purchasing GMO grain as non-GMO (IP) grain	- Contracting with producers - Testing at receipt - CIPRS – IP and traceability program	yes
	Purchasing non-organic product as organic	Purchasing from certified organic producers	yes
	Misrepresenting crop year	Inspection of grain	yes
	Misrepresenting variety of grain	- Inspection of grain - Producer declarations	yes
Handling	Blending conventional grain into higher value specialty grain (non-GMO or organic)	- Grain handlers are organic certified - Non-GMO product is IP through CIPRS - Traceability	yes
	Blending excessive dockage into grain to increase weight	Inspection prior to shipping	yes
Shipping	Misrepresenting crop year	Traceability through CGC HACCP or CIPRS	yes
	Representing non-organic grain as organic	Grain handlers are organic certified	yes
	Representing GMO grain as non-GMO	CIPRS – IP and traceability program	yes
	Misrepresenting the origin of the grain	Traceability through CGC HACCP or CIPRS	yes
