Audit of NATO Operational Support Authorities

978-0-660-75014-9 D2-684/2025E-PDF 1259-3-0099 ADM(RS) January 2025

At a Glance

- In 2021, the Minister of National Defence (MND) received Treasury Board (TB) approval to enter into exceptional contractual arrangements with NATO (North Atlantic Treaty Organization) agencies until March 31, 2026.
- The Department committed to auditing NATO transactions for compliance with policies and guidance as part of the TB submission (Annex B).
- The exceptional contractual arrangements were first used in fiscal year (FY) 2023/24 for the
 purchase of services, following sub-delegation of authority by the MND in June 2022. At the
 time of the audit, sub-delegation for goods was outstanding.
- Purchases from NATO agencies are considered non-competitive procurements, and the procurement process is managed by NATO.
- All 32 NATO agency-related transactions were reviewed as part of this audit.
- Transactions generally complied with legislation, TB policy and directives, and departmental guidance.
- Annual reporting to Public Services and Procurement Canada (PSPC) and the Treasury Board Secretariat (TBS) will be delivered later this year. All reporting requirements must be met before final submission to ensure appropriate oversight exists.

Key Findings and Risks	Recommendations
Finding 1: NATO agency-related transactions were executed in compliance with legislation, TB policy and directives, and departmental guidance. Finding 2: Ninety-four percent of the transactions were recorded accurately in the departmental system of record. Finding 3: The Department of National Defence (DND) and the Canadian Armed Forces (CAF) have established a process map to outline roles and responsibilities. The accompanying SharePoint structure needs to be better aligned with the process map to ensure contracting files are complete.	Recommendation 1: The CAF should continue to define and finalize standard operating procedures (SOP) and update its Canadian Joint Operations Command (CJOC) J4 Contracts SharePoint to support a complete audit trail, allowing effective verification, tracking and reporting in compliance with legislation, TB policy and directives, and departmental guidance.

Table 1. Key Findings and Recommendations

ADM(RS) 2/11

Background

The MND's contracting authority stems from laws, regulations and policies. Key acts include the *National Defence Act* and the *Financial Administration Act* (FAA), which outline responsibilities for financial management.

TB sets delegation policies, ensuring consistency with government standards. PSPC manages the procurement and provision of goods, services and construction for federal departments, including defence projects.

Currently, the MND can authorize contracts (FAA Section 41) not exceeding \$375,000 for goods or services for non-competitive procurement. TB has provided an exceptional authority to DND to acquire logistic support, supplies and services from NATO agencies to a total of | | | | | | | | | per mission, including amendments.

The intention of this exceptional authority is to enable the CAF to leverage NATO agency-contracted solutions for logistics support, supplies and services during combined exercises, training, deployment, operations and other cooperative efforts. These may complement CAF support structures or DND/PSPC-contracted solutions. These transactions are all considered sole source per Government of Canada contract regulations.

The Defence Resource Management Information System (DRMIS) and other related systems are being modernized to support procurement transactions and departmental governance. As a result, the CAF must implement manual controls, track transactions outside systems of record and send information to headquarters for input.

The exceptional contracting authority for NATO agencies was first used in FY 2023/24 for the purchase of services, following sub-delegation of authority by the MND in June 2022.¹ At the time of the audit, sub-delegation for goods was outstanding.²

ADM(RS) 3/11

¹ All related transactions made prior to FY 2023/24 were paid under the Department's contracting authority for the non-competitive procurement of goods and services.

² The Request and Authorization letter—which provides delegation for the services authority from the Minister of PSPC to the MND following TB approval of the exceptional contracting limit—was signed in September 2023. The goods contracting authority was sent to the Deputy Minister's office mid-October 2023 for signing. The MND signed a new departmental matrix in May 2024, allowing CJOC to obtain a revised exceptional authority for NATO agency-related contracts that included goods.

Key Findings

Finding 1: NATO agency-related transactions were executed in compliance with legislation, Treasury Board policy and directives, and departmental guidance.

Contracting files need to be accurately recorded and complete to provide transparency over compliance with requirements and to support internal and external reporting. Reliable and complete records ensure that DND and the CAF can meet mandatory contract reporting requirements.

NATO agency-related transactions were generally executed in compliance with departmental policies and guidelines. Controls were in place, and documentation supported compliance with legislation (79 percent), TB policy and directives (88 percent) and departmental guidance (86 percent) on all files, with noted improvement as use increased. Further details on NATO contracts and transaction compliance can be found in <u>Annex C</u>.

Legislative Compliance: Certification authority (Section 34) accounted for most legislative non-compliance as invoices could not be located on SharePoint. All NATO agency-related contracting files on SharePoint were reviewed as part of this audit. Payment authority (Section 33) is completed outside of CJOC J4 and is not included in testing results.

TB Policy and Directive Compliance: TB policy and directives are designed with regular operations in mind. Some requirements may not fit the context of the exceptional contracting authorities.

Departmental Compliance: The Department has added rules on contracting in general, as well as for the purposes of exceptional contractual arrangements. Adherence to these requirements should be considered in context and justified accordingly. For example, concept of operations is an internal procedure that could be combined with requirement identification.

The operations have not exceeded the approved limit of | | | | | | | | | | per mission. Current forecasts per mission also do not exceed this limit, as presented in Annex D.

The exceptional contracting limit was used for the pre-determined types of services.³ As shown in Finding 2, the internal order for tracking transactions under the exceptional contractual arrangements was incorrectly used twice for unrelated purchases.

A review of all NATO agency-related contracts and transactions in FY 2023/24 determined that other formal contracting solutions had been exhausted prior to exercising this authority for the purchase of services by submitting a sole source justification or by completing an options analysis.

ADM(RS) 4/11

³ This included medical, port, camp, linguistics and software services.

Vendor conflict of interest was not assessed during the compliance file review as conflicts of interest are managed by NATO based on privacy and commercial competition rules. NATO financial regulations, rules and procedures outline the controls to manage conflicts of interest in its procurement processes.

Finding 2: Ninety-four percent of the transactions were recorded accurately in the departmental system of record.

In FY 2023/24, 32 transactions totaling were recorded in DRMIS under NATO
internal orders. Accurate tracking is vital for transparency and reporting (Annex D). Of these, 30
transactions totaling $ \ \ \ \ \ \ \ \ \ \ \ \ $ were related to NATO agencies, and two totaling $ \ \ \ \ \ \ \ \ \ \ \ \ \ $
were miscoded but remain uncorrected due to fiscal year-end constraints.

DRMIS currently lacks automated controls to prevent incorrect use of internal orders. The planned implementation of DEFENCEx could prevent inappropriate internal order use.

Finding 3: The Department of National Defence and the Canadian Armed Forces have established a process map to outline roles and responsibilities. The accompanying SharePoint structure needs to be better aligned with the process map to ensure contracting files are complete.

The audit found that while DRMIS entries were accurate, SharePoint data did not align, complicating reconciliation. Access to financial details was challenging, highlighting the need for manual data verification.

Manual controls are essential for data accuracy and completeness, especially with limited access to financial systems during operations. Digitalization could improve error prevention and access.

NATO and DND/CAF accountabilities for transactions are outlined in the procurement process map, a tool for tracking use of the exceptional contractual authority.

There are no set SOPs for file management, leading to a reliance on technical authorities for documentation and on headquarters to follow up on missing files. A checklist exists but is unused. Implementing clear procedures for file storage would reduce missing documents and improve operational continuity.

ADM(RS) 5/11

Audit of NATO Operational Support Authorities

January 2025

Recommendation 1:

The CAF should continue to define and finalize SOPs and update its CJOC J4 Contracts SharePoint to support a complete audit trail, allowing effective verification, tracking and reporting in compliance with legislation, TB policy and directives, and departmental guidance.

OPI: CJOC

OCI: Assistant Deputy Minister (Materiel) (ADM(Mat))

Management Response:

CJOC and ADM(Mat) management agree with the recommendation.

Conclusion

NATO agency-related transactions were executed in compliance with legislation, TB policy and directives, and departmental guidance. Internal controls over financial management and contracting requirements were established and generally followed. NATO agency-related transactions within the financial system of record, DRMIS, were recorded accurately. PSPC and TBS reporting requirements will be fulfilled later this year.

To improve the accuracy and completeness of contracting data and financial information, key stakeholders should continue to define and finalize SOPs and update SharePoint to ensure a complete audit trail in compliance with legislation, TB policy and directives, and departmental guidance.

Oversight and monitoring will need to continue improving compliance related to legislation, while SOPs could enable context to determine the requirement to follow departmental guidance.

January 2025

Annex B: About the Engagement

This engagement conforms with the Internal Auditing Standards for the Government of Canada, as supported by the results of the Quality Assurance and Improvement Program.

Objective

The objective was to assess whether transactions with NATO agencies, entered into by use of the exceptional contracting limit, were executed in compliance with applicable departmental policies and guidance and reported annually to TBS.

Scope and Approach

Table D-1. NATO Agency-related Contracts Financial Information by Internal Order in FY 2023/24.

DND has developed a method to capture NATO agency-related expenditures and produce mandated reports through internal orders based on DRMIS data. Internal orders are used to monitor costs and revenues associated with specific tasks. They provide capabilities for planning, monitoring and allocating costs to ensure that the expenditures on NATO agency-related contracts are properly tracked and reported. All the transactions reviewed as part of this audit scope were reconciled through DRMIS.
