## 2019 Algal Bloom Report - Lake Erie

Satellite-derived algal bloom indices for Lake Erie have been estimated using data from the European Space Agency's OLCI (Ocean Land Colour Instrument) for 2016 to present, and MERIS (Medium Resolution Imaging Spectrometer) for 2002 to 2011.

Daily bloom indices are derived from 14-day rolling-average satellite data products. Annual bloom indices are reported as the averages and maxima over the June to October monitoring period.

**Table 4. Terminology**

Bloom Index	Description
Bloom Flag	A per pixel bloom flag is raised when Chlorophyll > 10 µg/L
Bloom Extent	Total area of pixels flagged as bloom (km <sup>2</sup> or % of lake area)
Bloom Intensity	Average chlorophyll concentration within area flagged as bloom (µg/L)
Bloom Severity	Bloom Intensity x Bloom Extent (µg/L km <sup>2</sup> )
Bloom Duration	Number of days a pixel is flagged in bloom (days)
