

# EOLakeWatch: Satellite observations for lake monitoring

## 2006 Algal Bloom Report - Lake of the Woods

Satellite-derived algal bloom indices for Lake of the Woods have been estimated using data from the European Space Agency's OLCI (Ocean Land Colour Instrument) for 2016 to present, and MERIS (Medium Resolution Imaging Spectrometer) for 2002 to 2011. Daily bloom indices are derived from 14-day rolling-average satellite data products. Annual bloom indices are reported as the averages and maxima over the June to October monitoring period.

\*2002 to 2018 average. No data available from 2012 to 2015.

**Table 4. Terminology**

| Bloom Index     | Description                                                               |
|-----------------|---------------------------------------------------------------------------|
| Bloom Flag      | A per pixel bloom flag is raised when Chlorophyll > 10 µg/L               |
| Bloom Extent    | Total area of pixels flagged as bloom (km <sup>2</sup> or % of lake area) |
| Bloom Intensity | Average chlorophyll concentration within area flagged as bloom (µg/L)     |
| Bloom Severity  | Bloom Intensity x Bloom Extent (µg/L km <sup>2</sup> )                    |
| Bloom Duration  | Number of days a pixel is flagged in bloom (days)                         |

\*2002 to 2018 average. No data available from 2012 to 2015.

ECCC EOLakeWatch algal bloom indices are produced using remote sensing data from the Envisat MERIS and Copernicus Sentinel-3 OLCI missions. Data made available by the European Space Agency (ESA).
