COMPENDIUM OF CANADA’S ENGAGEMENT IN INTERNATIONAL ENVIRONMENTAL AGREEMENTS AND INSTRUMENTS

UN Convention on the Law of the Sea (UNCLOS)

PLAIN LANGUAGE SUMMARY

The Convention governs relations among countries on oceans-related issues. It outlines the rights and responsibilities countries have related to the use of the oceans, the seabed and their resources, and the protection of the ocean environment. It defines the parts of the ocean where countries with coastlines have sovereignty, rights or jurisdiction, including the right to use and manage resources through activities such as fishing or oil exploration. It also sets out the rights of countries in other countries’ zones, including rights related to navigation, conducting research and laying cables, and the rights all countries enjoy in the parts of the ocean that are beyond the legal control of any specific country.

OBJECTIVE

UNCLOS sets out the legal framework within which activities in the oceans and seas are carried out. The Convention governs many aspects of oceans affairs, from navigation and fisheries to scientific research and the rights of coastal states to explore, exploit, conserve, and manage resources within 200 nautical miles of their shores. Most of UNCLOS is now generally considered to be a reflection of customary international law, applicable to all states.

KEY ELEMENTS

Establishes 12 nautical miles as the breadth of the territorial sea, with a right of innocent passage through these waters.

Secures for coastal states sovereign rights for the purpose of exploring and exploiting, conserving and managing the natural resources of their waters in a 200-nautical-mile exclusive economic zone (EEZ).

Provides coastal states with the right to prevent, reduce, and control marine pollution from vessels in ice-covered areas within the limits of the exclusive economic zone.

Confirms coastal state jurisdiction over the living and non-living resources of the seabed and subsoil of the continental shelf up to, and, in some instances, beyond the 200-nautical-mile EEZ. Defines the process to delineate and achieve international recognition for these outer limits where they lie beyond the 200 nautical mile limit.
Establishes a regime for the development of the mineral resources of the deep seabed and sharing of the benefits, for the area located beyond 200 nautical miles.

Sets out rules for the conduct of marine scientific research.

Imposes duties on all states to ensure, through proper conservation and management measures, the long-term sustainability of fish resources.

Contains comprehensive rules for the protection and preservation of the marine environment and imposes duties on states to protect the oceans from all sources of pollution.

**EXPECTED RESULTS**

The Convention’s success lies in balancing the rights of coastal states to manage waters under their sovereignty, sovereign rights or jurisdiction with the rights of other states in these waters, particularly those related to navigation. It promotes the peaceful settlement of disputes relating to the oceans by establishing mechanisms and compulsory procedures for the settlement of disputes arising from the interpretation and application of the provisions of the Convention.

**CANADA’S INVOLVEMENT**

Canada participates in the work of various bodies created under UNCLOS, including the International Seabed Authority (ISA), an organization created to administer the mineral resources of the Area (the seabed beyond national jurisdiction).

Canada supports the work of the Commission on the Limits of the Continental Shelf (CLCS), an expert body established by UNCLOS to review submissions from coastal states and make recommendations on the location of the outer limits of their continental shelves beyond 200 nautical miles from their baselines.

In keeping with its commitments under the UN Fish Stocks Agreement, which applies to straddling and highly migratory fish stocks, Canada is also a member of a number of regional fisheries management organizations (RFMOs), including the Northwest Atlantic Fisheries Organization (NAFO) (1979), and has been an active participant in promoting reforms in these RFMOs based on the UN Fish Stocks Agreement.

**RESULTS / PROGRESS**

**Activities**

International Seabed Authority (ISA). At the 2016 session, Canada was re-elected to the Council, which is the executive organ, and for the first time, a Canadian representative was elected to the Finance Committee. The ISA is in a crucial phase of its existence as it is currently developing, and hopes to soon finalise the regulatory regime for the exploitation of deep-sea mineral resources in areas beyond national jurisdiction. This will include the defining royalty rates and the benefits sharing regime, reflecting the Common Heritage of Mankind principle expressed in UNCLOS.

Limits of the Continental Shelf (CLCS). A Canadian was elected to serve on the Commission for the 2017-2022 term.

A submission defining the outer limits of Canada’s continental shelf in the Atlantic Ocean was filed with the CLCS in December 2013. The last research cruise to gather scientific data in the Arctic Ocean took place summer 2016 and Canada is now preparing to file its Arctic submission in early 2019.

Canada participates actively in elaborating the annual Oceans and the Law of the Sea, and Sustainable Fisheries resolutions at the UN, and the annual meeting of states Parties to UNCLOS, including the triennial election of judges to the International Tribunal for the Law of the Sea (ITLOS).

Environment and Climate Change Canada’s Environmental Stewardship Branch and enforcement offices provide advice on environmental policy to GAC and to DFO, to support Canada’s participation in the annual meeting of the United Nations Open-ended Informal Consultative Process on Oceans and the Law of the Sea (UNICPOLOS or ICP).

Canada was an active participant in the Preparatory Committee established by General Assembly resolution 69/292 “Development of an internationally legally binding instrument under the United Nations Convention on the Law of the Sea on the conservation and sustainable use of marine biological diversity of areas beyond national jurisdiction (BBNJ)." After two years of Preparatory Committee meetings, the United Nations General Assembly convened an Intergovernmental Conference to develop the text of a legally binding agreement on BBNJ. Canada maintains an active participation in this process, and was elected as one of its 15 Bureau members.

**Reports**

- Reports of the meetings of States Parties to UNCLOS
- Decisions of the International Tribunal on the Law of the Sea
- Reports pertaining to the ISA
• Reports on the progress of the CLCS
• Reports of the Preparatory Committee established by General Assembly resolution 69/292 on the conservation and sustainable use of marine biological diversity of areas beyond national jurisdiction.

Results

UNCLOS provides a predictable and stable legal regime applicable to oceans globally, including a framework for shipping, delineation of maritime boundaries and the outer limits of the continental shelf, environmental protection, marine scientific research, and deep seabed mining. It establishes mechanisms and compulsory procedures for the peaceful settlement of disputes related to the oceans arising from the interpretation and application of the provisions of the Convention.
