19 Substances Associated with Pesticidal Uses

Topic	Comment	Response
Risk assessment	It is agreed that the 19 substances are not "toxic" as defined under the Canadian Environmental Protection Act, 1999 (CEPA).	Noted.
Risk management	The 19 substances should continue to be managed under the <i>Pest Control Products Act</i> .	Pesticidal use of these substances is assessed and regulated through the Pest Management Regulatory Agency under the <i>Pest Control Products Act</i> . New non-pesticidal applications of these substances may be subject to the Significant New Activity (SNAc) provisions under CEPA.
Risk management	The 19 pesticide substances should be subject to SNAc provisions under CEPA.	The Government of Canada is planning to propose to apply the SNAc provisions to the 19 substances.
Risk management	The 19 pesticide substances should not be subject to ongoing future Domestic Substances List Inventory Update (DSL IU) surveys.	The Government of Canada is currently considering amending the <i>Domestic Substances List</i> to indicate that the significant new activities provisions apply as the primary mechanism for monitoring future changes in the use profiles of the 19 pesticide substances.
Stakeholder consultation	A stakeholder offered to provide feedback and consultation on proposed SNAc wording.	Noted.
Communications	Revise communications related to the 19 pesticide substances in the final screening assessment to provide relevant information without raising unnecessary concerns.	This recommendation is considered in the final screening assessment.
