The Department of Finance Canada announced today that Canada's official international reserves decreased by an amount equivalent to US\$2,118 million in September to US\$125,288 million. This was driven by losses on reserves management operations (US\$56 million)¹ and a net loss on investments (US\$2,062 million)².

Details on the level and composition of Canada's reserves as of September 29, 2026, as well as the major factors underlying the change in reserves, are provided below. All figures are in millions of US dollars unless otherwise noted.

Notes:

1. Net change in securities and deposits resulting from foreign currency funding activities of the government. Foreign reserves are managed under an asset-liability matching framework. Therefore, when a foreign currency liability matures, assets are used to repay the principal, leading to a decrease in reserves. In September 2026, Canada bills increased by US\$98 million to a level of outstanding bills of US\$1,622 million. An equivalent of US\$820 million in cross-currency swaps was raised during the month while US\$974 million in cross-currency swaps matured during the month.
 2. Net investment gains and losses include return on investments, foreign currency debt charges and revaluation effects.
 3. "Other reserve assets" include the distribution of SDRs allocated to Canada by the IMF as part of the IMF Resilience and Sustainability Trust borrowing agreement.
 4. "Return on investments" comprises US\$260 million of interest earned on investments and a US\$1,385 million decrease in the market value of securities.
 5. "Revaluation effects" reflect changes in the market value of reserve assets resulting from movements in exchange rates. In September 2026, the revaluation effect was mainly due to the depreciation of the euro and the pound sterling, with an offsetting appreciation in the value of the yen.
 6. "Net government operations" are the net purchases of foreign currency for government foreign exchange requirements and for additions to reserves.
 7. "Foreign currency securities" include maturities of foreign currency debt, cross-currency swap payments and an estimate of interest payments on foreign currency liabilities.
 8. "Pledged assets" are securities posted as collateral to cover unsettled transactions and are included in total reserves.
 9. "Securities lent under repurchase agreements" are included in total reserves. Collateral provided in securities lending transactions is not included in total reserves.
 10. Cash invested under repurchase agreements is included in total reserves. Collateral provided in securities lending transactions is not included in total reserves.
