

Draft Guidance Document

Preparation of Product Monographs in the Extensible Markup Language Format

This guidance document is being distributed for comment purposes only.

Draft date: 2019/05/15

Health Canada is responsible for helping Canadians maintain and improve their health. It ensures that high-quality health services are accessible, and works to reduce health risks.

Également disponible en français sous le titre :

Ébauche de la ligne directrice : Préparation des monographies de produit en format Extensible Markup Language

© Her Majesty the Queen in Right of Canada, as represented by the Minister of Health, 2019

Publication date: May 2019

This publication may be reproduced for personal or internal use only without permission provided the source is fully acknowledged.

Foreword

Guidance documents are meant to provide assistance to industry and health care professionals on how to comply with governing statutes and regulations. Guidance documents also provide assistance to staff on how Health Canada mandates and objectives should be implemented in a manner that is fair, consistent, and effective.

Guidance documents are administrative instruments not having force of law and, as such, allow for flexibility in approach. Alternate approaches to the principles and practices described in this document may be acceptable provided they are supported by adequate justification. Alternate approaches should be discussed in advance with the relevant programme area to avoid the possible finding that applicable statutory or regulatory requirements have not been met.

As a corollary to the above, it is equally important to note that Health Canada reserves the right to request information or material, or define conditions not specifically described in this document, in order to allow the Department to adequately assess the safety, efficacy, or quality of a therapeutic product. Health Canada is committed to ensuring that such requests are justifiable and that decisions are clearly documented.

This document should be read in conjunction with the accompanying notice and the relevant sections of other applicable Guidance documents.

92		

93 1. Introduction

94 1.1 Purpose/overview

95 To provide sponsors with guidance on the technical and business conformance rules needed to
96 prepare a product monograph using the Extensible Markup Language (XML) format and the
97 Health Level 7 (HL7) Structured Product Label (SPL) standard.

98 1.2 Scope and application

99 1.2.1 In-scope

100 Human pharmaceutical drugs, biologic drugs and radiopharmaceuticals, regulatory activities
101 submitted in electronic format: Electronic Common Technical Document (eCTD) or non-eCTD
102 format.

103 1.2.2 Out of scope

104 Over the counter (non-prescription) drugs, self-care products, natural health products, medical
105 devices, food and veterinary drugs.

106 1.3 Policy objectives

107 In recent years Health Canada announced a number of measures that will be taken to support
108 the health and safety of Canadian families, one of which is improving drug product labels. As
109 part of the HPFB's strategic plan, the goal is to:

- 110 • provide more relevant and easier to understand drug information on labels, in order to
111 help Canadians make better informed decisions about their medications, and
- 112 • encourage the adoption of digital health technology to improve access, increase
113 efficiency, and improve outcomes for patients.

114 As part of this initiative, the HPFB recognized that unstructured formats, like Portable
115 Document Format (PDF), are not adequately positioned to support the objectives mentioned
116 above. We will therefore need to transition to more advanced technology formats. Particular
117 attention will be focused on formats that are open source and supported by international
118 standards.

119 One such format is XML; a markup language used to encode documents in a structured format
120 that is both human-readable and machine-readable. Since it is an open standard, XML is a
121 widely used format for exchanging electronic documents and data.

122 With respect to international standards, the HPFB aims to align its use of XML with other
123 international regulators, HL7 standards and the International Organization for Standardization
124 (ISO) standard for the Identification of Medicinal Product (IDMP).

125 1.4 Policy statements

126 This guidance document serves as the technical implementation guide for the Health Product
127 and Food Branch's (HPFB) structured product monograph; which is based on XML, HL7's SPL
128 standard and controlled vocabularies.

129 This guidance document is to be used in the preparation and filing of product monographs in
130 the XML format and is to be read in conjunction with the Guidance Document Product
131 Monograph.

132 1.5 Background

133 1.5.1 Extensible Markup Language (XML)

134 XML is a text-based markup language used to encode electronic documents in a structured
135 format that is both human and machine-readable. XML is used as a common format to facilitate
136 the interchange of data over the Internet.

137 XML is a free open standard maintained by the World Wide Web Consortium (W3C).

138 1.5.2 Health Level 7 (HL7) international

139 Founded in 1987, HL7 is a not-for-profit standards development organization dedicated to
140 providing standards for the exchange of electronic health information that supports clinical
141 practice and the management of health services.

142 Healthcare providers, government stakeholders, payers, pharmaceutical companies,
143 vendors/suppliers, and consulting firms support HL7.

144 Health Canada is contributing member of HL7.

145 1.5.3 Structured Product Label (SPL) standard

146 Structured Product Labeling (SPL) is a Health Level Seven International (HL7) standard which
147 defines the content of human prescription drug labeling in an XML format. In the Canadian
148 context, the product monograph is the 'label' or 'the document' that is being structured.

149 1.5.4 Structured document

150 In this context, structure refers to the fact that the product monographs content has been
151 encoded with XML; i.e., the content has been 'markedup' with XML to make it machine-
152 readable. As a result, the narrative text (e.g., section headings, all text and tables) and product
153 information (e.g., manufacturer, ingredients, dosage forms and packaging) are encoded and can
154 be found easily through search.

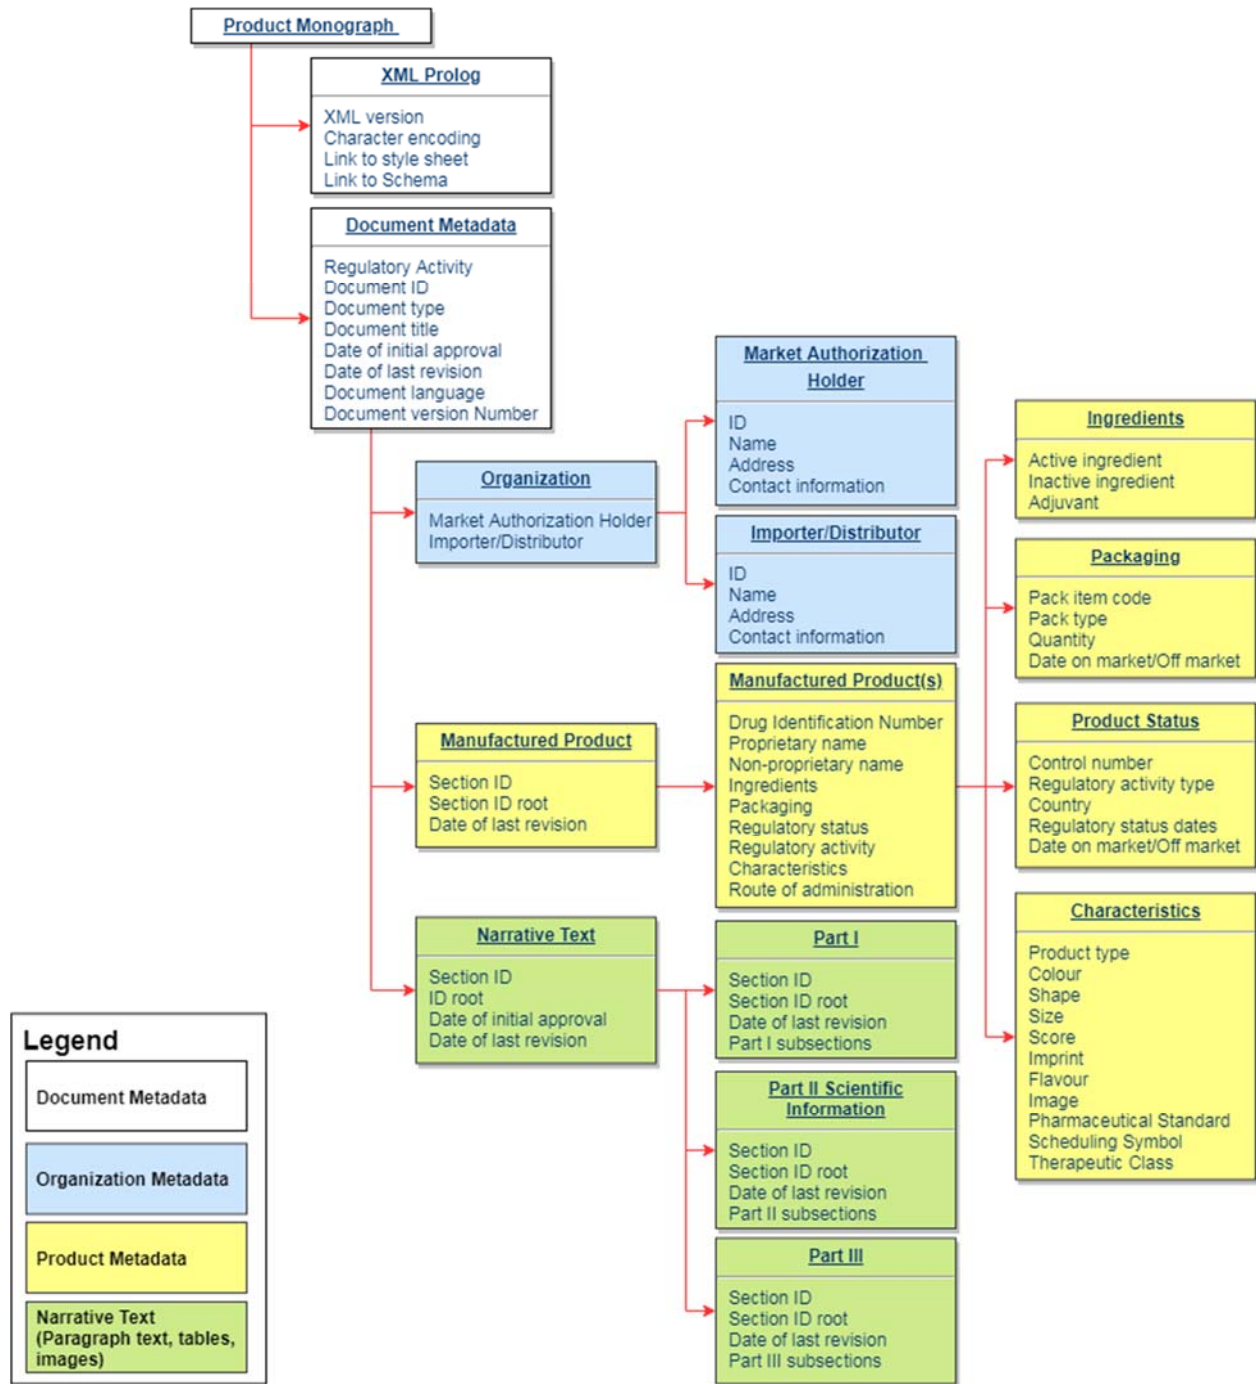

155 2. Guidance for implementation

156 2.1 XML Product Monograph structure, content and concepts

157 2.1.1 Simplified metadata hierarchy

158 Figure 1 is a simplified view of the XML product monographs metadata hierarchy.

159 **Figure 1: Simplified view of the XML product monographs metadata hierarchy**

160

161

162 Table 1 provides a summary of the six components that make up the XML product monograph.

163

164 **Table 1: Summary of the six components that make up every XML product monograph**

Component		Description
1.	XML Prologue	Instructions to software programs; e.g., XML version, links to the style sheet and schema.
2.	Document Metadata	Identifies the type of document, its unique identifier, its version and its language (French or English).
3.	Organization Metadata	Information about the sponsor; e.g., company name, unique company identifier, address and role.
4.	Manufactured Product Metadata	Brand name, dose form, proper/generic name, active ingredients, inactive ingredients, adjuvants, packaging, unit of presentation, marketing status, route of administration.
5.	Narrative Text	Product monograph content (excluding images); e.g., section headings, paragraphs, formatting, text and tables.
6.	Images	Encoded references to all accompanying images; e.g., figures, chemical structure, instructions for use.

165 **2.1.2 Output folder structure**

166 XML files end with a .xml file extension and only contain basic text. As a result, the XML product
 167 monograph is made up of a single .xml file and separate image files as .jpg's.

168 The .xml file contains all text based content, text formatting instructions (e.g., bold, underline,
 169 bullets), metadata and references to the relevant image files. Since images are not text they
 170 always accompany the .xml as separate files. This is also why the .xml only contains references
 171 to images rather than the images themselves.

172 The .xml and the .jpg's must always remain together in the same folder to avoid naming clashes
 173 with other files and to ensure the .xml file can always find the corresponding .jpeg files.

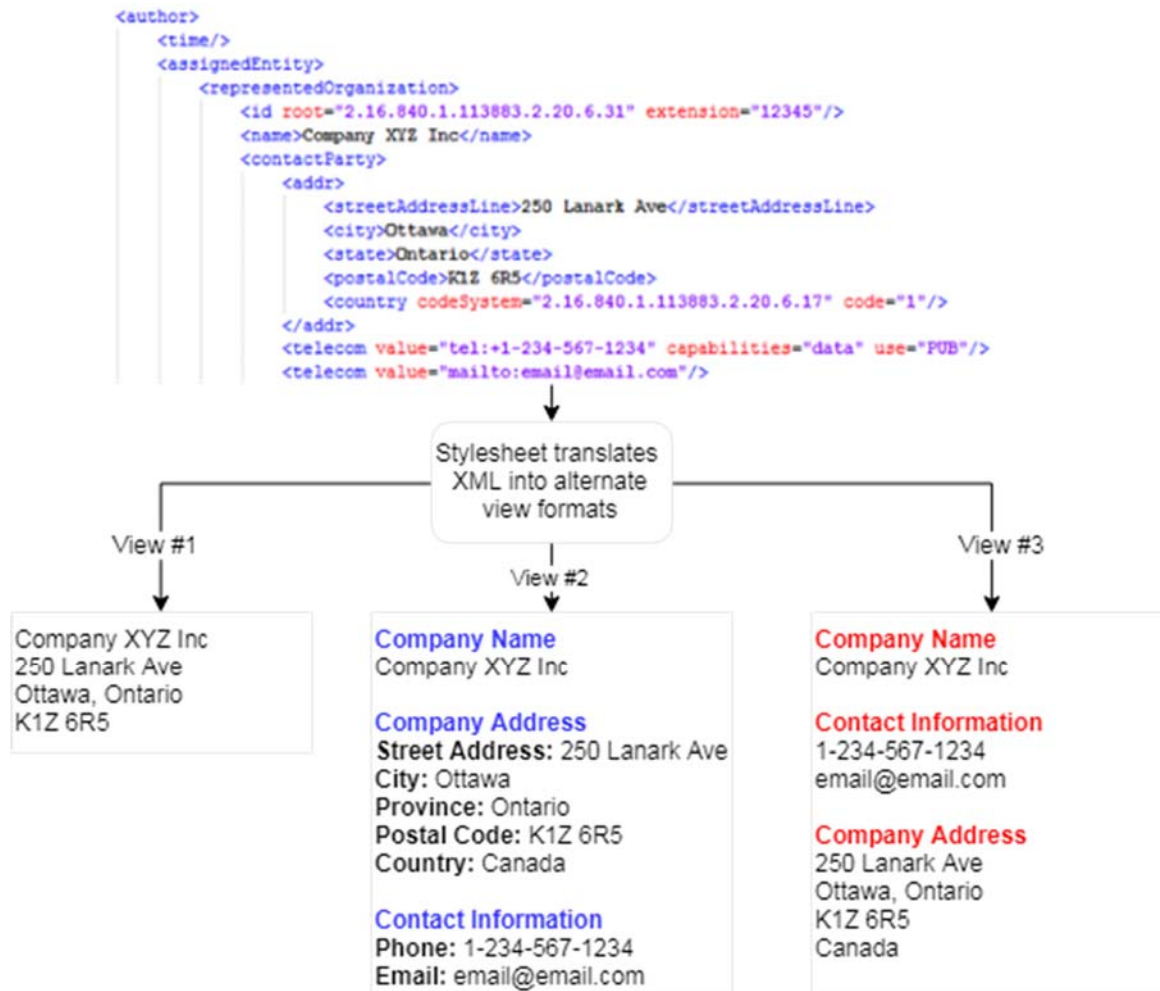

174 **Figure 2: Sample file and folder structured for a XML Product Monograph**

175
 176 **2.1.3 Style sheet**

177 A style sheet is a file or collection of files that describes how XML content should be displayed;
 178 both in terms of appearance and structure. Style sheets do not change or modify the source
 179 content in the XML document. The style sheet only modifies how the content is presented to
 180 the end user. See Figure 3 for a simple example.

181 **Figure 3: XML before and after the application of a style sheet**

182

183 2.1.4 Derived content

184 Another unique aspect of XML documents and style sheets is derived content; i.e., content that
185 exists in the XML but not in the format that is displayed by the style sheet. E.g., the product
186 monograph Table of Contents and the Product Metadata Summary are automatically generated
187 from metadata and text pulled from throughout the XML. The style sheet collates these
188 disparate elements and presents them in a defined format and style. Schema

189 The purpose of the schema is to define the key rules and boundaries that the XML document
190 must adhere to. The metadata hierarchy in Figure 1 is a representative example of the structure
191 that is enforced by HL7's SPL schema.

192 The schema goes further by defining how many of a given element the XML document can or
193 cannot have. E.g., there can only be one XML Prolog section; there must be one or more
194 manufactured products.

195 2.1.5 Validation

196 Validation is the process of checking a XML document against its schema to confirm that it is
197 both well-formed and valid.

198 A XML document is considered well-formed if it conforms to the W3C’s XML version 1.0
199 standard.

200 A XML document is considered valid if it conforms to the schema. In this context the XML
201 product monograph must comply with HL7’s SPL schema.

202 2.1.6 Controlled vocabularies

203 A controlled vocabulary is an established list of standardized, predefined and authorized terms
204 used for indexing and information retrieval. A controlled vocabulary ensures that a subject will
205 be described using the same term each time it is indexed, making it easier to find all
206 information about a specific topic during the search process. They are controlled using a
207 defined governance model, policies, guidance and change control procedures.

208 The XML product monograph is accompanied by a set of HPFB approved controlled
209 vocabularies. Use of these vocabularies is mandatory.

210 The HPFB’s controlled vocabulary list includes, but is not limited to: dosage-form, route of
211 administration, pack type, units of presentation, units of measure, section id, ingredient id,
212 ingredient role.

213 Refer to the HPFB’s online registry for a full list of controlled vocabularies and their terms.

214 2.1.7 Object Identifiers (OID)

215 OIDs are identifiers based on the International Organization for Standardization (ISO). They are
216 used to name objects or concepts with a globally unique name.

217 Each of the HPFB’s vocabularies will be registered with HL7 international and assigned a unique
218 OID to facilitate identification, search and retrieval.

219 2.16.840.1.113883.2.20.6 is the root OID for the HPFB itself. All HPFB controlled vocabularies
220 will use extensions of this OID. E.g., 2.16.840.1.113883.2.20.6.3 (or OID 6.3) refers to the HPFB’s
221 approved list of dosage forms.

222 All of the HPFB’s controlled vocabularies, and their OID’s, will be posted online to the Health
223 Canada website. From there stakeholders will be able to view or download copies of the
224 approved terms and their attributes.

225 2.2 Template types

226 2.2.1 2016 Templates

227 The XML product monograph supports the following 2016 templates:

- 228 1. Product Monograph Template - Standard
- 229 2. Product Monograph Template - Notice of Compliance with Conditions
- 230 3. Product Monograph Template - Subsequent Entry Product (except for Schedule C and D
231 products)
- 232 4. Product Monograph Template - Schedule C
- 233 5. Product Monograph Template - Schedule D
- 234 6. Product Monograph Template - Schedule D - Biosimilar Biologic Drug

235 2.2.2 Legacy template

236 The Legacy Template refers to any product monograph template that predates the 2016
237 templates. i.e., 2014 templates, 2004 templates, pre-2004 templates or any combination
238 thereof.

239 Since the 2016 template is relatively new, most approved product monographs fall into the
240 legacy template category. The legacy template will allow sponsors to recreate their legacy
241 product monographs in the XML format without compromising the validation rules related to
242 section headings.

243 However, the Legacy Template cannot be used in lieu of the 2016 templates. The following
244 conditions must be met before being eligible to use the Legacy Template:

- 245 • **Condition #1:** Pre-existing approved products: New products are expected to begin their
246 lifecycles with the 2016 template. Therefore, only products approved with a legacy
247 template are eligible.
- 248 • **Condition #2:** No content changes: The XML product monograph is a direct copy of the
249 approved product monograph; i.e., the content in the XML product monograph is
250 identical to the approved version and no content changes have been made.
- 251 • **Condition #3:** Metadata reflects what is approved: The XML product monograph's
252 metadata reflects only what is in the approved product monograph; e.g., the XML
253 product monograph metadata cannot include strengths or ingredients not in the
254 approved product monograph.
- 255 • **Condition #4:** Compliant with the SPL schema: The XML product monograph is
256 compliant with the SPL schema.

257 2.3 Submission process

258 Sponsors filing a regulatory activity with an XML product monograph for the first time are
259 recommended to following this process.

260 Beyond the first filing, this process is not necessary for subsequent regulatory activities unless
261 there is a significant change. E.g., changes to HL7 specification; changes to the Health Canada
262 specification; sponsor switches to new tool to build the XML product monograph.

263 2.3.1 Step 1: Hold technical pre-submission consultation

264 This consultation is for Health Canada to offer assistance and guidance on the technical,
265 scientific or regulatory aspects of the XML product monograph. This consultation does not need
266 to take place at the same time as the regulatory pre-submission meeting.

267 Request a consultation by contacting the Office of Submissions and Intellectual Property (OSIP)
268 at OSIP-BPPI@hc-sc.gc.ca. Include the following information in the request:

- 269 1. the purpose of the meeting
- 270 2. a brief description of the product to be discussed at the meeting
- 271 3. three proposed dates for the meeting, including whether an afternoon or morning
272 meeting is being requested
- 273 4. type of meeting requested, in person, teleconference, or web conference

274

- 275 5. an agenda for the meeting
276 6. the names of sponsor representatives attending the meeting

277 2.3.2 Step 2: File a sample XML product monograph

278 Samples are validated by Health Canada to identify and help resolve any issues. Health Canada
279 will notify the sponsor via email if issues are identified; the sponsor corrects the errors and re-
280 submits the sample (this process continues until no issues are identified). If no issues are
281 identified the sponsors XML product monograph should be ready for filing.

282 This period is not part of and will not delay the review process.

283 Sponsors can submit sample XML product monographs to OSIP at OSIP-BPPI@hc-sc.gc.ca.

284 2.3.3 Step 3: File the regulatory activity

285 The Sponsor files the regulatory activity with the XML product monograph.

- 286 1. **Validation:** Health Canada validates the XML product monograph to identify any issues.
287 2. **Issues identified:** Health Canada will notify the sponsor via email if errors have been
288 identified. The sponsor will correct and re-submit an updated transaction with the
289 corrected XML product monograph (this process will continue until all issues have been
290 resolved).
291 3. **No issues identified:** If no issues have been identified, the regulatory activity is
292 processed as per the relevant process.

293 2.4 Lifecycle management

294 2.4.1 Formats

295 For the initial regulatory activity (e.g., NDS, SNDS, ANDS, SANDS) product monographs shall be
296 provided in the following formats:

- 297 1. Product monograph (clean) – XML format (.xml file and associated .jpg files)
298 2. Product monograph (clean) – Word format (.docx file)
299 3. Product monograph (annotated) – Word format (.docx file)

300 For regulatory transactions submitted during review (e.g., response to request for clarification)
301 product monographs shall be provided in the following formats:

- 302 1. Product monograph (clean) – Word format (.docx file)
303 2. Product monograph (annotated) – Word format (.docx file)

304 Product monographs shall be provided in the following format within 20 calendar days of the
305 issuance of a Notice of Compliance (NOC):

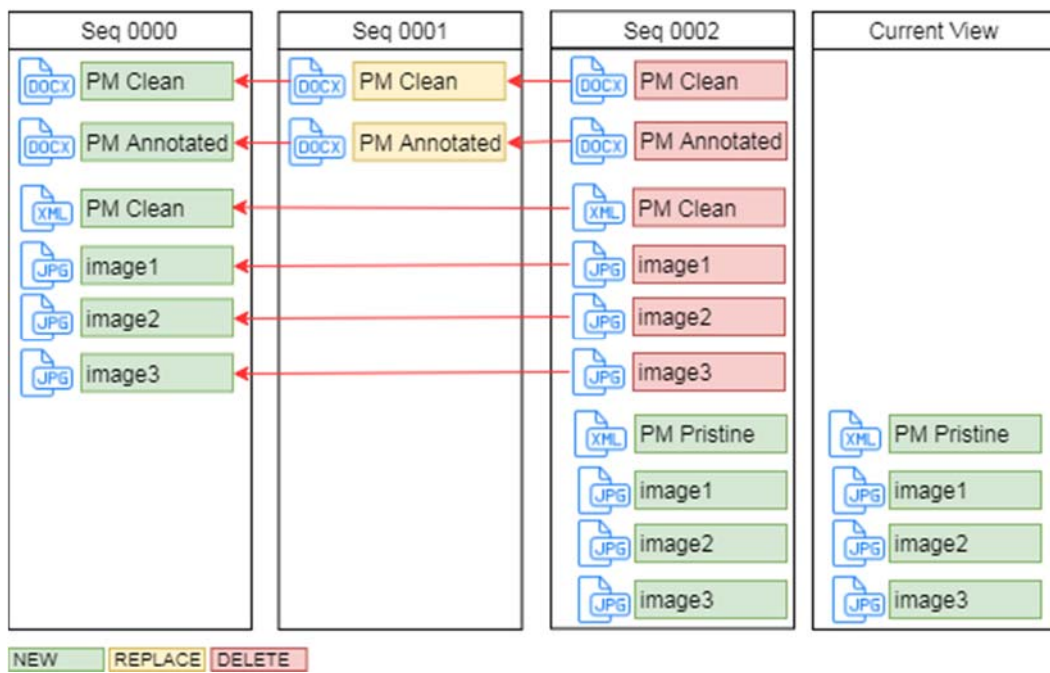

- 306 1. Product monograph (clean) English – XML format (.xml and .jpg files)
307 2. Product monograph (clean) French – XML format (.xml and .jpg files)

308 2.4.2 Lifecycle for regulatory activities in the eCTD Format

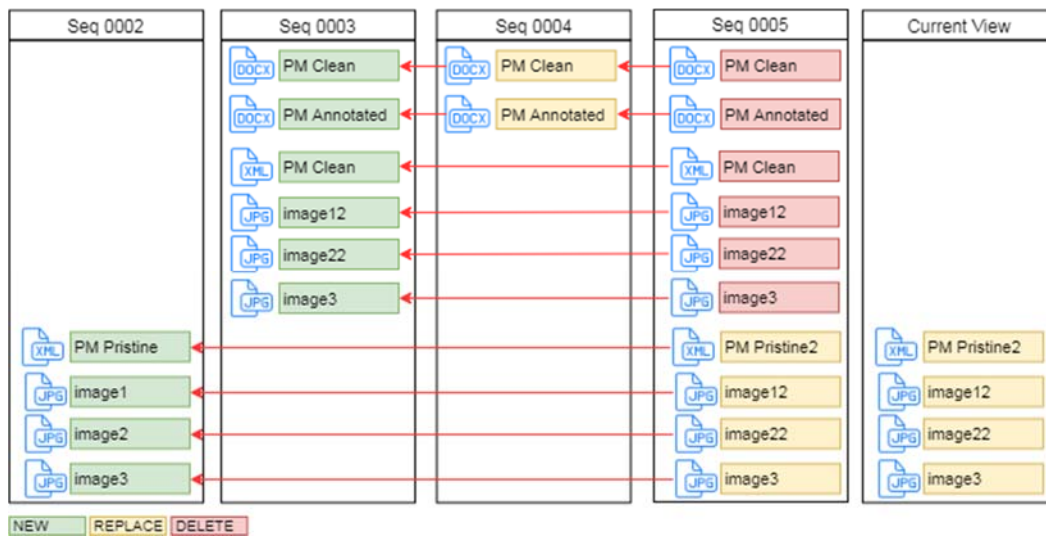

309 Sponsors should use the following eCTD lifecycle attributes to manage Word and XML product
310 monographs under the following circumstances (Refer to Figure 5, Figure 6 and Figure 7 for
311 examples):

- **'NEW'** when a clean or annotated product monograph is provided as part of the first transaction of a regulatory activity (e.g., NDS, SNDS).
- **'REPLACE'** when a clean or annotated product monograph is provided in response to clarification request, screening deficiency notice (SDN), notice of deficiency (NOD), notice of non-compliance (NON).
- **'NEW'** when a pristine product monograph is provided for the first time. The last clean and annotated draft product monographs should be assigned the operation attribute 'DELETE'.
- **'REPLACE'** when a pristine product monograph is provided to replace a previously approved pristine product monograph. The last clean and annotated draft product monographs should be assigned the operation attribute 'DELETE'.

323 **Figure 4: Example of an eCTD lifecycle for the first regulatory activity and its transactions**
 324 **(e.g., NDS or ANDS)**

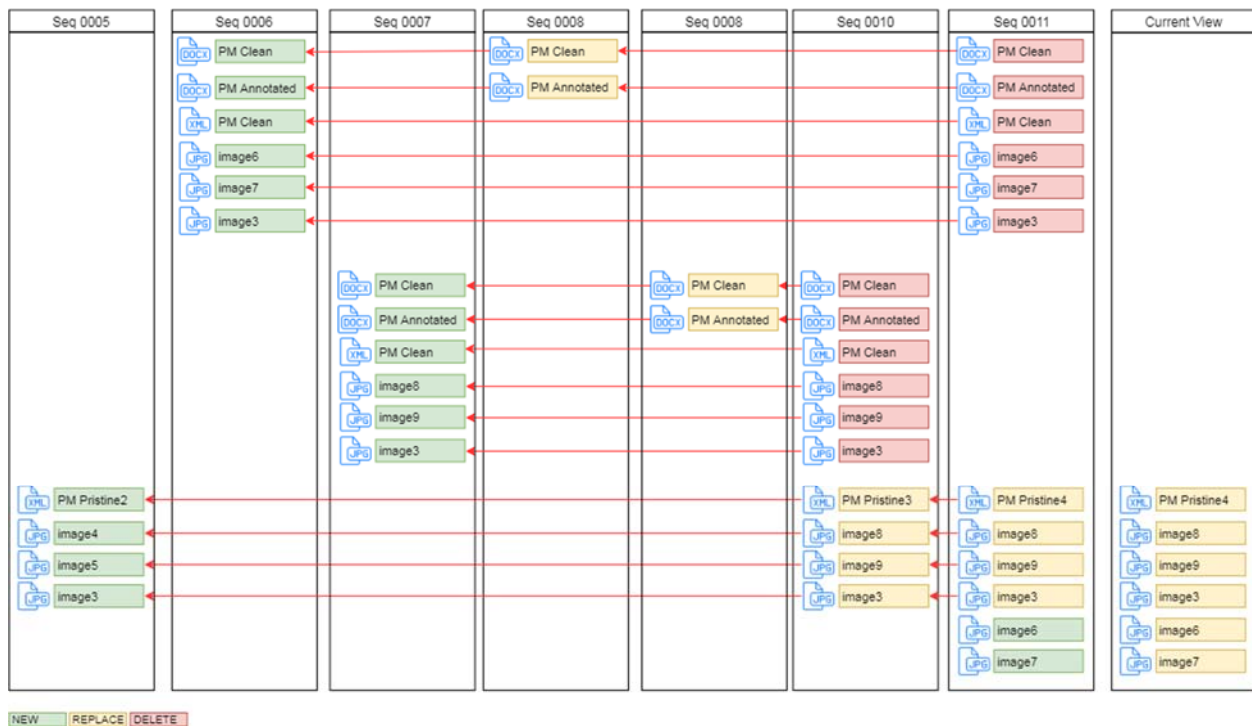

327 **Figure 5: Example of an eCTD lifecycle for a subsequent regulatory activity and its**
 328 **transactions (e.g., SNDS, SANDS)**

329

330 **Figure 6: Example of an eCTD lifecycle for regulatory activities under simultaneous review**

331

332 2.4.3 Lifecycle for regulatory activities in the non-eCTD Electronic Format

333 Unlike eCTD lifecycles, non-eCTD electronic submissions do not have XML backbones or XML
 334 attributes. Therefore, there is no document lifecycle.

335 Sponsors are only required to submit product monograph files in the formats outlined under
 336 section 0; i.e., Word and XML with the initial submission, Word only during review and XML
 337 only for the final pristine submission.

338 2.5 Important considerations

- 339 • The XML product monograph is the legal document. The Microsoft Word copies are
340 considered convenience copies to facilitate review.
- 341 • Once a sponsor files a regulatory activity with a product monograph in the XML format,
342 all subsequent regulatory activities for the same product monograph must be filed in
343 XML format.
- 344 • The HPFB will only provide validation reports for XML product monographs that fail
345 validation. Sponsors are expected to validate the XML product monograph and correct
346 any warning(s) and error(s) before submitting them to the HPFB.

347 2.6 Business conformance rules

348 The following section provides business, scientific and regulatory instructions for each of the
349 major sections of the XML product monograph (as depicted in Figure 1 and Table 1) and their
350 respective sub-elements.

351 The heading names for this section use the following format: Health Canada term (SPL term;
352 controlled vocabulary OID).

353 2.6.1 XML prolog

354 This section provides technical data meant for software applications and developers. It is not
355 intended to be modified by sponsors.

356 2.6.1.1 XML version and character encoding

357 The version of XML in use and the standard for character encoding (i.e., UTF).

358 2.6.1.2 Stylesheet location

359 Link to the Health Canada stylesheet.

360 2.6.1.3 Schema location

361 Link to Health Canada's copy of the HL7 SPL schema.

362 2.6.2 Document metadata

363 2.6.2.1 Regulatory activity (templateID OID .11)

364 The type of regulatory activity associated with this version of the product monograph; e.g.,
365 NDS, SNDS, ANDS, SANDS.

366 Product monographs updated with a Level III Change are not submitted to Health Canada.
367 However, sponsors are expected to keep their XML product monograph up to date with Level III
368 Changes. Sponsors will select Level III Change as the regulatory activity if this version of the
369 product monograph is related to a Level III Change.

370 Regulatory Activity is specified from the appropriate Health Canada controlled vocabulary.

371 2.6.2.2 Document ID (id root; OID .10)

372 The Document ID is the unique identifier for this product monograph regardless of the version
373 number.

374 This Document ID is assigned with the first version of a given product monograph and does not
375 change. The purpose of this ID is to ensure all versions of a product monograph can be tied
376 back to a common parent ID.

377 Document ID is assigned using a globally unique identifier (GUID); e.g., 123e4567-e89b-12d3-
378 a456-426655440000.

379 2.6.2.3 Document type (code; OID .10)

380 The type of document is specified; e.g., product monograph - standard or product monograph –
381 schedule D.

382 The document type is specified from the appropriate Health Canada controlled vocabulary.

383 Refer to the Guidance Document - Product Monograph for further details on the available
384 product monograph types.

385 2.6.2.4 Document title (title)

386 The title should include the following information in the following sequence as text:

387 <Scheduling Symbol> <BRAND NAME> (<common name>), <Dosage Form(s), Strength(s) and
388 Route(s) of Administration>, <Pharmaceutical Standard (if applicable)>, <Therapeutic
389 Classification>.

390 2.6.2.5 Date of initial approval (effective time low) and date of last revision (effective time high)

391 Use Date of Initial Approval for a new product monograph. The date is the original NOC date.

392 Use Date of Last Revision for subsequent revisions to any part of the product monograph. The
393 date is the NOC date from the most recent regulatory activity.

394 Since the Data of Initial Approval or Date of Last Revision is not known to the sponsor in
395 advance of filing it can be added to the XML product monograph when the pristine version is
396 filed following the issuance of a NOC.

397 Product monographs updated with a Level III Change are not submitted to Health Canada.
398 However, sponsors are expected to keep their XML product monograph up to date with Level III
399 Changes. In the case of a Level III Change, the Date of Last Revision is the date the Level III
400 Change was finalized by the sponsor.

401 2.6.2.6 Document language (language code; OID .29)

402 The language in which the content is based.

403 Language is specified from the appropriate Health Canada controlled vocabulary.

404 2.6.2.7 Document set ID (Set ID)

405 The unique identifier for this version of the product monograph. Unlike the Document ID, the
406 Document Version ID is unique for each version of the product monograph.

407 The Document Version ID is assigned using a GUID.

408 2.6.2.8 Document version number (version number)

409 The version number for this product monograph is specified as integers.

410 2.6.3 Organization metadata

411 2.6.3.1 Market authorization holder (Represented Organization; OID .31)

412 The full legal name, company ID, address and contact information for the sponsor in whose
413 name the Drug Identification Number (DIN) and NOC is to be registered.

414 The product monograph is a public document. Therefore, sponsors are advised not to include
415 contact information for an individual. Only include corporate contact information (company
416 website and 1-800 number).

417 The legal name of the organization, and its corresponding company ID, are specified from the
418 appropriate Health Canada controlled vocabulary.

419 Company address and contact information are specified as text.

420 2.6.3.2 Canadian importer/distributor (Assigned Organization; OID .31)

421 If the address of the Market Authorization Holder is NOT located in Canada then the Canadian
422 organization responsible for the sale of this product in Canada must be specified.

423 The full legal name, company ID, address and contact information for organizations involved in
424 the import or distribution of the active ingredient(s) and drug product(s) associated with this
425 product monograph.

426 The product monograph is a public document. Therefore, sponsors are advised not to include
427 contact information for an individual. Only include corporate contact information (company
428 website and 1-800 number).

429 The legal name of the organization, and its corresponding company ID, are specified from the
430 appropriate Health Canada controlled vocabulary.

431 Company address and contact information are specified as text.

432 2.6.4 Manufactured product metadata

433 This section captures details about the manufactured form of the drug product.

434 One manufactured product information section is required for each variation in strength,
435 dosage form and formulation.

436 2.6.4.1 Manufactured product

437 2.6.4.1.1 Drug Identification Number (DIN) (template id extension; OID .42)

438 The DIN assigned to this product by Health Canada can be specified as text.

439 Since the DIN is not known to the sponsor in advance of filing it can be added to the XML
440 product monograph when the pristine version is filed following the issuance of a NOC.

441 2.6.4.1.2 Brand name (name)

442 The brand name is specified as text.

443 2.6.4.1.3 Dosage form (form code; OID .3)

444 The manufactured dosage form is specified from the appropriate Health Canada controlled
445 vocabulary.

446 2.6.4.1.4 Nonproprietary name (name)

447 The non-proprietary name is specified as text.

448 The International Non Proprietary Names (INN) is used as Health Canada's standard to assign
449 the preferred name to ingredients.

450 2.6.4.1.5 Ingredients (ingredient substance; OID .14)

451 The ingredient, ingredient identifier and role are specified from the appropriate Health Canada
452 controlled vocabulary.

453 The following sections describe how to manage ingredients, their role and strength/quantity.

454 2.6.4.1.6 Ingredient role - cctive (ingredient class code; OID .39)

455 Active ingredients are specified using one of the following controlled vocabularies:

- 456 1. **Active Ingredient - Basis of Strength (ACTIB):** The ingredient substance is itself the basis
457 of strength. The strength specifies the quantity of the substance in the formulation.
- 458 2. **Active Ingredient - Moiety is Basis of Strength (ACTIM):** The ingredient's therapeutic
459 moiety is the basis of strength. The strength specifies the quantity of the substance's
460 therapeutic moiety in the formulation.
- 461 3. **Active ingredient - Reference substance is basis of strength (ACTIR):** In situations
462 where the active ingredient has undergone a change in chemical form the therapeutic
463 moiety may be in a different form; e.g., an in-situ conversion of one salt to another salt
464 and the strength is expressed in terms of the active moiety (a base). In this case,
465 another reference substance with the same therapeutic moiety is the basis of strength.
466 The strength specifies the quantity of the reference substance present in the
467 formulation.

468 Quantity is mandatory for active ingredients

469 2.6.4.1.7 Ingredient role - Adjuvant (ADJV) (ingredient class code; OID .39)

470 The role ADJV is selected from the Health Canada controlled vocabulary.

471 Quantity is optional for adjuvants

472 2.6.4.1.8 Ingredient role - Inactive (IACT) (ingredient class code; OID .39)

473 The role IACTIV is selected from the Health Canada controlled vocabulary.

474 Quantity is optional for inactive ingredients.

475 2.6.4.1.9 Ingredient strength (quantity)

476 The strength/quantity is specified using a numerator (value and unit) and a denominator (value
477 and unit of presentation).

478

479 **Table 2: Examples of how to present the strength of active ingredients**

	Numerator Value	Numerator Unit (Unit of Measure)	Denominator Value	Denominator Unit (Unit of Measure/ Presentation)
10 mg per tablet	10	mg	1	Tablet
0.2 ml per syringe	0.2	ml	1	Syringe
2 mg per 5 ml	2	mg	5	ml

480 2.6.4.2 Packaging

481 2.6.4.2.1 Pack ID

482 The sponsor can specify a unique ID number for this package.

483 2.6.4.2.2 Pack type (container packaged product form code; OID .32)

484 The type of packaging is specified from the appropriate Health Canada controlled vocabulary.

485 2.6.4.2.3 Packaging quantity (quantity)

486 The quantity of the packaging is specified using a numerator (value and unit) and a
 487 denominator (value and unit of presentation). The following table provides examples of how
 488 packaging quantity is managed.

489 **Table 3: Examples of how to present packaging quantity**

	Numerator Value	Numerator Unit (Unit of Presentation)	Denominator Value	Denominator Unit	Pack Type
10 tablets per bottle	10	Tablet	1	1	Bottle
1 ml per syringe	1	mL	1	1	Syringe
10 syringes per box	10	Syringe	1	1	Box

490 2.6.4.3 Regulatory status of packaging

491 2.6.4.3.1 Regulatory status (Marketing Act; OID .11)

492 The marketing act refers to the regulatory status of the manufactured product; e.g., approved,
 493 cancelled, marketed, dormant. It is specified from the appropriate Health Canada controlled
 494 vocabulary.

495 This regulatory status is equivalent to the status of the product's DIN(s).

496 2.6.4.3.2 Regulatory activity and Control Number (Approval; OID .37)

497 The Health Canada Control Number for this regulatory activity is also listed. Since the Control
 498 Number is not known to the sponsor in advance of filing it can be added to the XML product
 499 monograph when the pristine version is filed following the issuance of a NOC.

500 The regulatory activity directly associated with the status; e.g., SNDS, SANDS. It is specified
 501 from the appropriate Health Canada controlled vocabulary.

502 2.6.4.3.3 Effective time low value

503 The effective time low value is the date of initial approval and is specified as a date in the
504 YYYYMMDD format.

505 2.6.4.3.4 Effective time high value

506 The effective time low value is the date when the DIN was cancelled or package was cancelled
507 from the market. It is specified as a date in the YYYYMMDD format.

508 2.6.4.3.5 Regulatory authority (territorialAuthority; OID 2.16.840.1.113883.2.20.6)

509 The authority is always HPFB and is specified from the appropriate Health Canada controlled
510 vocabulary.

511 2.6.4.3.6 Regulatory status of product

512 The status of the product is described; e.g., Approved, Cancelled. The status is and is specified
513 from the appropriate Health Canada controlled vocabulary.

514 The effective time low value is the date of initial approval and is specified as a date in the
515 YYYYMMDD format.

516 The effective time low value is the date when the DIN was cancelled. It is specified as a date in
517 the YYYYMMDD format.

518 2.6.4.4 Characteristics

519 2.6.4.4.1 Product Class (template id extension; OID .53)

520 The type of manufactured drug product is specified from the appropriate Health Canada
521 controlled vocabulary; e.g., biologic, radiopharmaceutical, pharmaceutical, disinfectant.

522 2.6.4.4.2 Colour (OID .24)

523 Where applicable, the colour can be specified from the appropriate Health Canada controlled
524 vocabulary.

525 2.6.4.4.3 Shape (OID .25)

526 Where applicable, the shape can be specified using the terms in the appropriate Health Canada
527 controlled vocabulary.

528 2.6.4.4.4 Size

529 Where applicable, the size or dimensions of the product is specified as text.

530 2.6.4.4.5 Score

531 Where applicable, the imprint can be specified as text.

532 2.6.4.4.6 Imprint

533 Where applicable, the imprint can be specified as text.

534 2.6.4.4.7 Flavour (OID .26)

535 Where applicable, the flavour can be specified as text.

- 536 2.6.4.4.8 Image
- 537 Where applicable, a reference to an image can be provided.
- 538 2.6.4.4.9 Combination product
- 539 Where applicable, the type of combination product can be specified from the appropriate
- 540 Health Canada controlled vocabulary.
- 541 2.6.4.4.10 Pharmaceutical standard
- 542 The pharmaceutical standard is specified from the appropriate Health Canada controlled
- 543 vocabulary.
- 544 2.6.4.4.11 Scheduling symbol
- 545 The Scheduling Symbol is specified from the appropriate Health Canada controlled vocabulary.
- 546 2.6.4.4.12 Therapeutic class
- 547 The therapeutic classification is specified from the appropriate Health Canada controlled
- 548 vocabulary.
- 549 2.6.5 Narrative text
- 550 This component includes the narrative text of the product monograph. This includes text
- 551 (paragraphs, lists, tables); formatting instructions (bold, underline, italics); sections and
- 552 subsections. The major section headings are as follows:
- 553 1. Title Page
 - 554 2. Recent Major Changes
 - 555 3. Part I: Health Professional Information
 - 556 4. Part II: Scientific Information
 - 557 5. Part III: Patient Medication Information

558 3. Appendices

559 Appendix A - Glossary

560 Acronyms

DIN	Drug Identification Number
eCTD	Electronic Common Technical Document
GUID	Globally Unique Identifier
HL7	Health Level 7
HPFB	Health Products and Food Branch
HTML	Hypertext Markup Language

ID	Identifier
IDMP	Identification of Medicinal Product
ISO	International Organization for Standardization
JFIF	JPEG File Interchange Format
JPEG	Joint Photographic Experts Group
OID	Object Identifier
PDF	Portable Document Format
SPL	Structured Product Label
UTF	Unicode Transformation Format
W3C	World Wide Web Consortium
XML	Extensible Markup Language
