

TALKING WITH TEENS ABOUT VAPING

A TIP SHEET FOR TEACHERS

BEFORE THE TALK: GET THE FACTS

Vaping has risks

- › Vaping can expose you to chemicals that can potentially harm your health.
- › Vaping can lead to physical dependence and/or addiction.
- › Vaping can increase coughing, wheezing and intensify asthma symptoms in teens.
- › The long-term health consequences of vaping are unknown.

Risks of nicotine

Nicotine is a highly addictive chemical. Youth and young adults are especially vulnerable to its negative health effects, as it can harm healthy brain development. It can make it harder for youth to concentrate, learn and manage their emotions.

It can also lead to physical dependence and/or addiction. Youth can become dependent on nicotine at lower levels of exposure than adults.

Although not all vaping products contain nicotine, the majority of them do, and the level of nicotine can vary. A vaping product can deliver more or less nicotine than a cigarette.

Quitting vaping can be challenging once one has developed a physical dependence and/or an addiction to nicotine. Nicotine withdrawal symptoms can be unpleasant.

Even if a vaping product does not contain nicotine, there is still a risk of being exposed to other potentially harmful chemicals.

Did you know?

- › Data from the 2022 Canadian Tobacco and Nicotine Survey (CTNS) shows that reducing stress (31%) was the most common reason youth ages 15–19 reported vaping with and without nicotine; other reasons include wanting to try it (27%) and because they enjoyed it (23%).
- › Vaping products can be difficult to recognize:
 - Devices come in a variety of shapes and sizes, such as resembling a USB flash drive or a pen;
 - Vaping may not leave a lingering identifiable smell;
 - Add-ons like vinyl “skins” or wraps can also make these items harder to recognize; and,
 - Some types of clothing may hide the use of vaping products.
- › Vaping products have many names, such as: e-cigarettes, vape pens, vapes, mods, disposables, and e-hookahs. They may also be known by their brand names.
- › The *Tobacco and Vaping Products Act* (TVPA) prohibits tobacco and vaping products to be sold or given to anyone under the age of 18. Be aware of the laws in your province or territory, as some have increased the age to 19 or 21.
- › The TVPA also sets out other limits on vaping products such as a maximum nicotine concentration of 20 mg/mL and restrictions on promotions, flavours and other ingredients.

Vaping and quitting smoking

Nicotine vaping products have not been approved in Canada as a quit smoking aid, so they are not available as a prescription at this point. However, a number of Canadians are trying to quit smoking by vaping nicotine, and have said it has helped. While the science is evolving, evidence suggests that vaping nicotine (using e-cigarettes), can help adults quit smoking.

For adults who are unable to quit smoking using authorized quit aids, completely replacing cigarette smoking with vaping will reduce their exposure to many of the harmful chemicals from tobacco smoke.

Learn more Canada.ca/quit-smoking.

It is not safe for youth to use any nicotine or cannabis products, including cigarettes and vaping products. The use of vaping for smoking cessation has only been studied in adults and there is no information currently available on the effectiveness in teens.

Vaping liquids

The ingredients typically found in vaping liquids include glycerol, flavours, propylene glycol and varying levels of nicotine.

The heating process can cause reactions and create new potentially harmful chemicals. Some contaminants, such as metals, might also get into the vaping products and then into the aerosol.

The long-term health effects of vaping nicotine and cannabis are unknown and continue to be researched.

Vaping and cannabis

Cannabis can be vaped using either dried cannabis, liquid, or solid cannabis extracts. Cannabis vaping products containing cannabis extracts (disposable vape pens, for example) can be very strong and contain up to 95% THC. THC, one of the substances in cannabis, can harm healthy brain development until the mid 20s. The higher the THC content consumed, the greater the risks to mental health including, the development or worsening of cannabis dependence, and feelings of anxiety and depression.

Risks of illegal vaping products

The use of vaping products including nicotine and cannabis vaping accessories obtained outside of the legal market can pose additional risks to health and safety. In 2019, an unregulated cutting agent, vitamin E acetate, was used in illegal THC-containing vaping products and was associated with an outbreak of E-cigarette or Vaping Product Use-Associated Lung injury which caused thousands of hospitalizations and dozens of deaths in the United States.

Youth cessation support

The “**I quit for me**” guide is for youth who want to quit using tobacco, cigarettes, or vapes. It can be used on its own, or as part of a facilitated group program.

Nicotine replacement therapies aren't recommended for teens

Nicotine replacement therapies (NRTs), including nicotine patches, gums or pouches, are designed to help adults stop smoking. They're not intended for anyone under 18 years of age unless it's recommended by their doctor. These products can be harmful if not used as directed.
