

Canada's progress towards global HIV targets (90-90-90)

There were an estimated **62,790** people living with HIV (PLHIV) in Canada at the end of 2020

Targets for the HIV care continuum

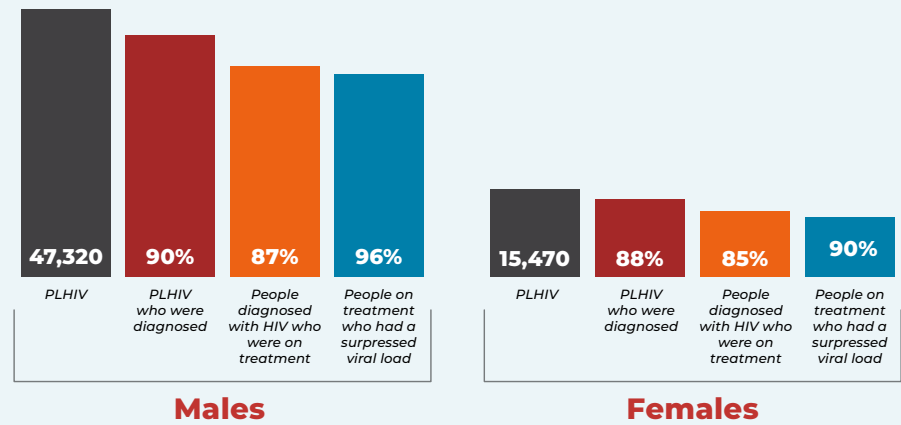

- 90%** PLHIV were diagnosed
- 87%** of people diagnosed with HIV were on treatment
- 95%** of people on HIV treatment had a suppressed viral load

1 in 10 PLHIV didn't know their status

2020

The HIV care continuum targets for females living with HIV in Canada are lower compared to males

Provinces/regions¹ vary on meeting HIV targets

- 1st** Six of ten jurisdictions met the first 90 target
- 2nd** Six of ten jurisdictions met the second 90 target
- 3rd** Eight of ten jurisdictions met the third 90 target

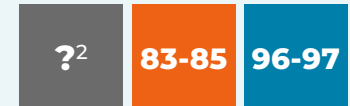

Key populations vary on the HIV care continuum targets²

People who inject drugs (2017-2019)³

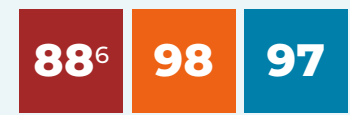

African, Caribbean and Black Community in Ontario (2018)⁴

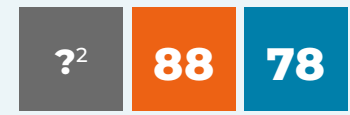

Gay, bisexual and other men who have sex with men in three urban centres (2017-2019)⁵

People incarcerated in federal correctional facilities (2020)

First Nations communities in Saskatchewan (2020)

¹ Some provinces and territories have been grouped into regions to align with how HIV care is delivered and due to small counts.
² Data on key populations do not always represent national-level data, and a full set of measures is not available for all communities.

⁶ A person is considered to be aware of their status if they were tested for HIV prior to incarceration, accepted voluntary testing on admission, or were referred for, or requested HIV testing during incarceration. This is a proxy for the first 90 indicator for federal correctional facilities, based on currently available data
