MOSQUITO-BORNE DISEASES SURVEILLANCE REPORT:

Annual Edition (2019 - Preliminary)

WHAT IS THE RISK?

West Nile virus (WNV) is the leading cause of domestically acquired **mosquito-borne diseases** (MBD) in Canada

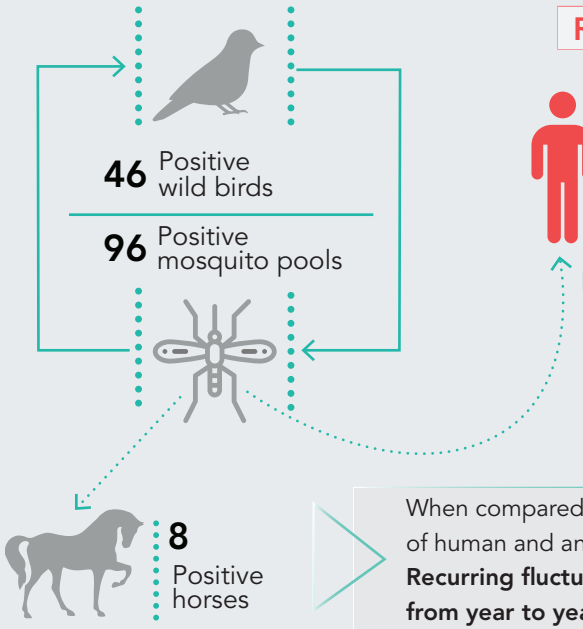
WHO'S AT GREATER RISK?

Advanced age and people with **underlying medical conditions** (e.g. diabetes, cancer, heart disease) are at increased risk of WNV neurological syndrome

HOW TO MANAGE?

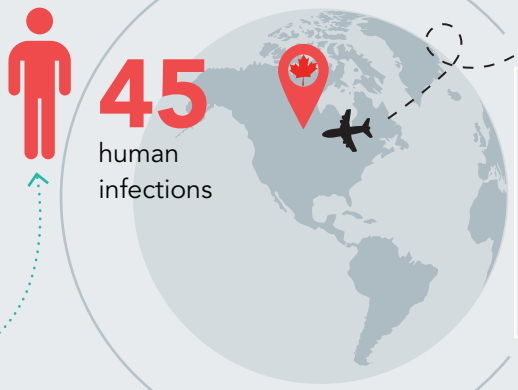
- There is **NO SPECIFIC TREATMENT OR VACCINE** for WNV
- Patients are treated for their symptoms

WNV TRANSMISSION



FACTS

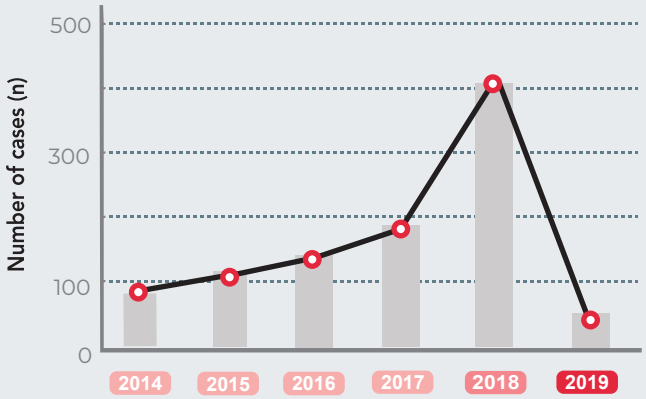
REPORTED IN 2019:



8 clinical cases were likely infected during travel

When compared to the previous 5 years, a lower number of human and animal cases were observed in 2019. **Recurring fluctuations in the number of WNV infections from year to year are not unexpected.**

Reported number of WNV human clinical cases in Canada, 2014–2019



OTHER MBD

2 human cases of **CALIFORNIA SEROGROUP** viruses

7 horses tested positive for **EASTERN EQUINE ENCEPHALITIS** virus

PUBLIC HEALTH RECOMMENDATIONS

Avoid becoming infected with WNV and other mosquito-borne diseases by:

PROTECTING YOURSELF

cover exposed skin

use insect repellent

REDUCING SURROUNDING RISK

eliminate standing water

maintain window and door screening
