

# THE NATIONAL DISASTER MITIGATION PROGRAM

**The National Disaster Mitigation Program** is a federal cost-sharing program that was created to address rising flood risks and costs, and help communities reduce, or even negate, the effects of flood events.

## There are four streams of funding available for communities:

**1**

### RISK ASSESSMENTS

This stream provides funding for risk assessments that identify specific flood risks and potential damage to a community and its infrastructure.

**2**

### FLOOD MAPPING

This stream provides funding for development and updates to flood maps that show where floods are most likely to occur and what damage they may cause.

**3**

### MITIGATION PLANNING

This stream provides funding for development and updates of mitigation plans that address how a community can take action to reduce potential flood damage, and how, when, and where this may happen (as well as who is responsible).

**4**

### INVESTMENTS IN MITIGATION PROJECTS

This stream provides funding for various non-structural and small-scale structural projects that improve a community's flood-readiness by preventing or reducing potential damage and losses.

## How to apply for funding

Submit a proposal at  
[Canada.ca/Flood-Ready](http://Canada.ca/Flood-Ready)  
under 'Making Communities Flood Ready'.

**Don't wait for the water!**
