Subject: Review of Environmental Assessment Processes

To the Minister of Environment and Prime Ministers office,

As a Canadian, I feel that that the Environment should be given top priority over industry, corporations, and government.

We need a referendum and constitutional initiative to make our water, soil, air, and cities as environmentally minded as possible. Oil pipelines, mining, the tar sands, and other corporations buying up our resources and land for their benefit is not in the interests of Canadians. We need to expand our National parks, protect what we have, clean up our waterways and hold corporations that push responsibility and costs to be environmentally responsible...they are the ones that must be held accountable.
