**Subject:** Reviews of environmental and regulatory processes

Dear Prime Minister

I understand that your government has recently announced reviews of several environmental and regulatory processes, including the EA process, modernization of the National Energy Board (NEB), as well as reviews of the Fisheries Act and the Navigation Protection Act.

I urge you to proceed very carefully in your reviews and to ensure balance in any reforms to the EA process, the NEB, or the Acts, to ensure that these processes remain science-based and independent from anti-development and anti-Canadian advocacy groups' interests and influence.

The EA process in Canada is considered one of the most comprehensive in the world and does not allow unchecked development, as some groups would imply.

The NEB has a history of enforcing strict compliance with regulations to guarantee the highest standards for our health and our environment. It also has a crucial role to play to ensure that responsible development of Canada's energy resources takes place.

Communities need laws that protect us, our environment, and our jobs and the economic development that supports us as a Nation. The vast majority of Canadian resource companies have proven their ability to both protect the environment at the same time as they are protecting our standard of living and providing many Canadians from across the country with honest, well-paying jobs.

We all need to work together to ensure that our environment and our economy are protected now and in the future. It is imperative that your government demonstrates the leadership needed to fulfill this responsibility and protect Canada and Canadians' interests, and the economy that sustains our standard of living and allows us to continue to be one of the best places on the planet to call home. .

Yours sincerely,

*C.D. ('Lyn) Anglin, PhD*
