Subject: Draft panel terms of reference

Panel must contain a balance of economic and social sectors of Canada. No more than one or at most two, representatives from private industry, or educational institutions, Government employees. And at least two representatives from civil society, as they are also experts on the impact of changes to the environment. One of these should be a representative of an activist organization.

There should also be a balance of political perspectives and bias, and vested interests e.g. for or against development.

Thank you
Paige Cousineau
